

Getting started with streaMLytics — API & CSV

This guide covers both data sources: **(1) the API connectors** (Spotify, YouTube, SoundCloud, Meta/Instagram) to fill in on the « API Credentials » page, and **(2) CSV file import** (Spotify for Artists, Apple Music, iMusician) via the « CSV Import » page.

Part 1 — API connectors

Spotify

You only need **2 values**: the **Client ID** and the **Client Secret**.

1. Go to developer.spotify.com/dashboard and sign in with your **usual Spotify account** (no paid plan required).
2. Click **Create app**.
3. Fill in: **App name** (e.g. ETL Dashboard), a **description**, and **Redirect URI** = `http://127.0.0.1:8888/callback` (dummy value, see the note below). Tick **Web API**, then **Save**.
4. On the app page → **Settings / Basic Information**: copy the **Client ID** and the **Client secret** (copy button ⓘ).

The screenshot shows the Spotify Developer Dashboard for an application named 'ETL Dashboard'. The 'Basic Information' tab is active. The Client ID is '24cc...' and the Client secret is '927...'. Both fields have a copy icon (ⓘ) to their right. The App name is 'ETL Dashboard', the App description is 'Application Streamlit pour visualiser les statistiques d'écoute et KPI musicaux depuis l'API Spotify', and the Website is 'http://localhost:8888/callback'. Red arrows point to the copy icons for the Client ID and Client secret, and to the Website field.

Basic Information → Client ID + Client secret

5. Paste the 2 values into **API Credentials → Spotify**, then **Test the connection**.

Field	Example (format)	Note
Client ID	3a9f1c7e8b2d4f60a1c5e9d3b7f02a6c	32 hexadecimal characters
Client Secret ⓘ	b7e2d9f04a1c6358e0a2b4c6d8e0f1a2	32 characters — keep it private

Note — **Redirect URI**: the return URL after an OAuth login. Our `client_credentials` flow has no login → this URL is **never used**, but Spotify requires at least one. Set `http://127.0.0.1:8888/callback` and forget it. The app stays in **Development mode**, which is enough.

YouTube

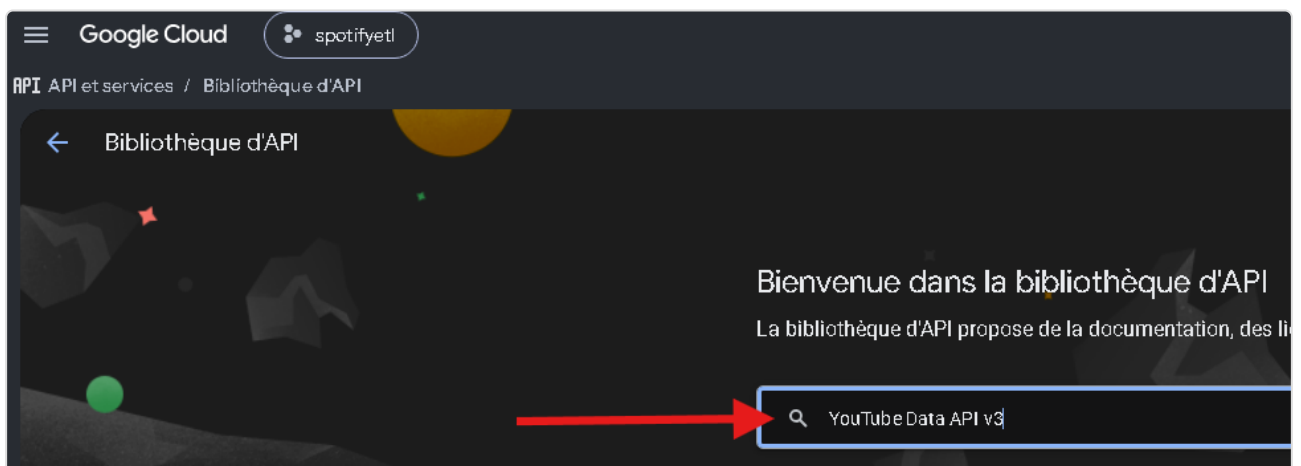

2 values to grab: the **API key** (YouTube Data API v3) and your **channel ID**.

1. At console.cloud.google.com/apis/dashboard, create (or select) a project, then click + **Enable APIs and services**.

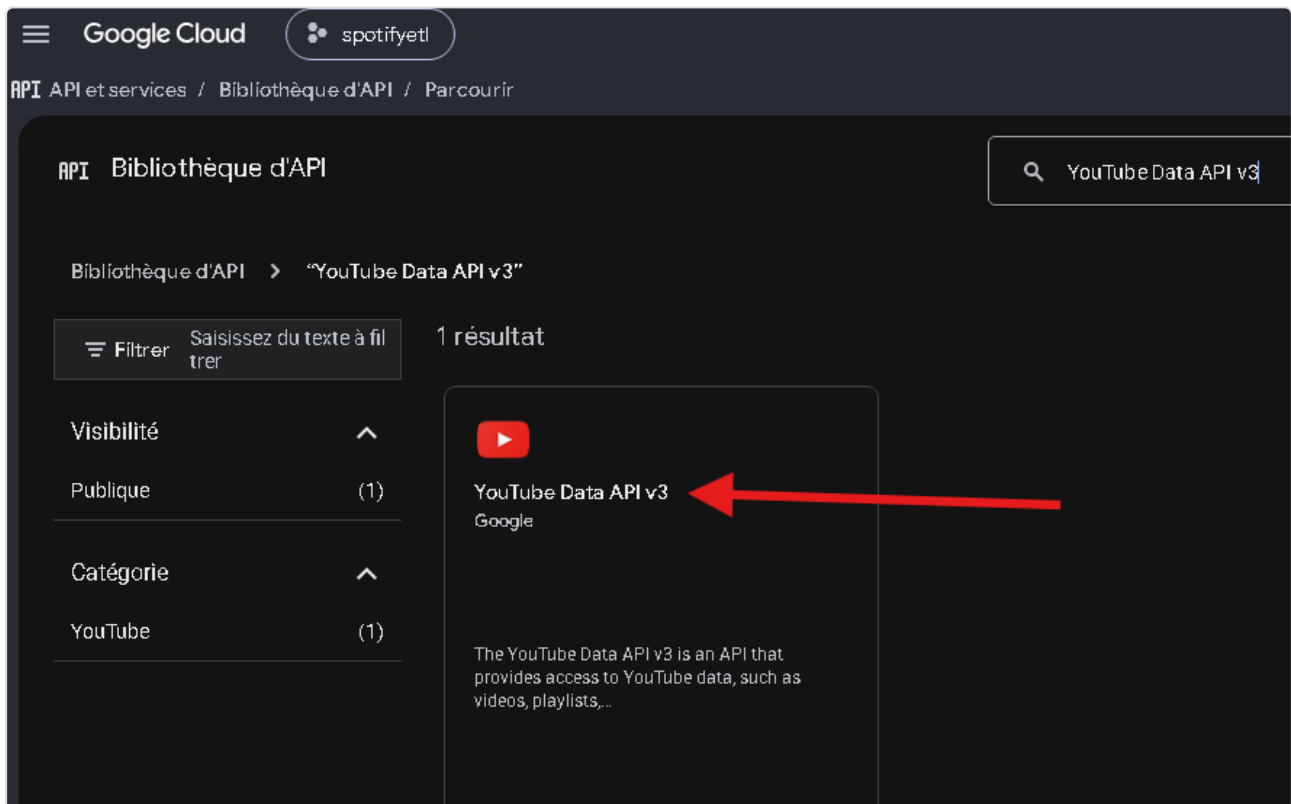

APIs & services → Enable APIs

2. In the [API Library](#), search for **YouTube Data API v3**.

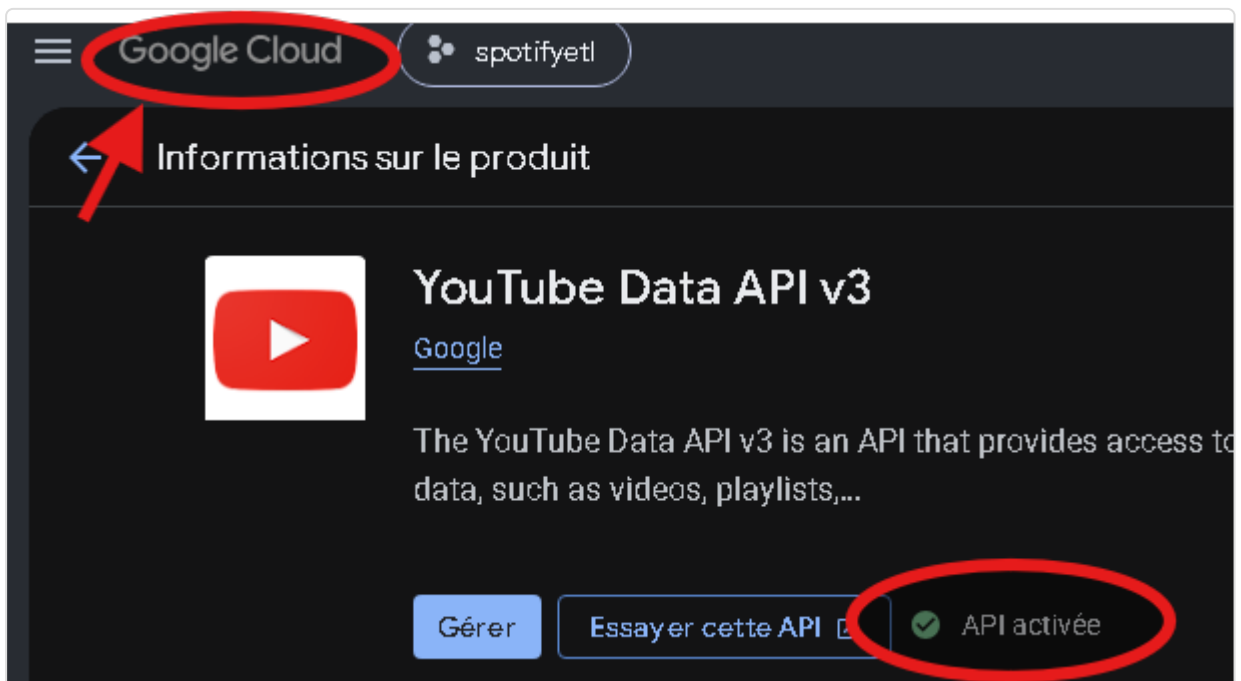

Library → search the API

3. Click the **YouTube Data API v3** result.

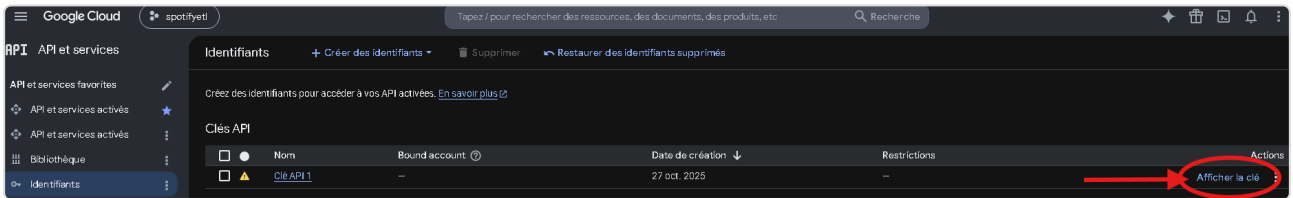

Select the API

4. Click **Enable**; the product page should show **API enabled**.

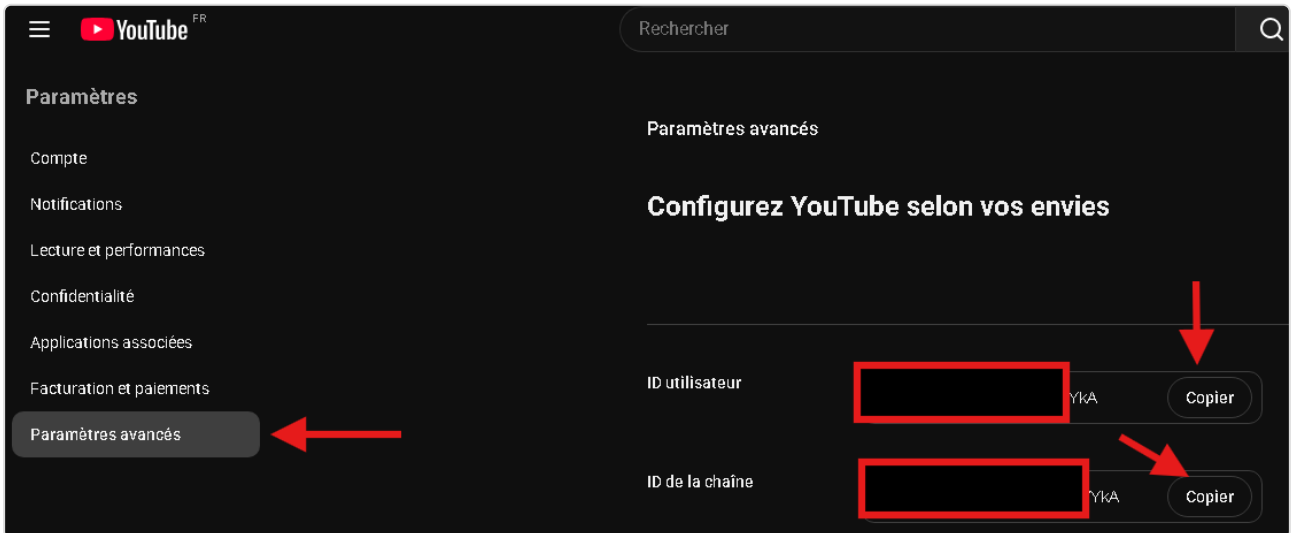

API enabled

5. Go to [Credentials](#) → **Create credentials** → **API key**, then **Show key** and copy it.

Credentials → API key → Show key

6. Get the **Channel ID**: at youtube.com/account_advanced → **Channel ID** → **Copy** (starts with UC...).

YouTube → Advanced settings → Channel ID

7. Paste the **API key** + the **Channel ID** into **API Credentials** → **YouTube**.

Field	Example (format)	Note
API Key 	AIzaSyA1B2c3D4e5F6g7H8i9J0kLmNoPqRsTuVwX	starts with 'AIza', ~39 characters
Channel ID	UC_x5XG10V2P6uZZ5FSM9Ttw	starts with 'UC', 24 characters

Note — Free quota ~10,000 units/day; exceeding it returns 403 (temporary).

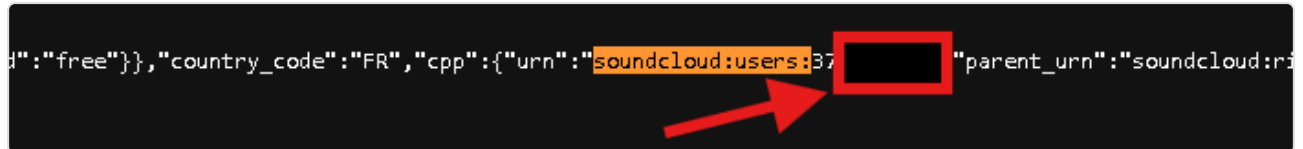

[Open the YouTube portal](#)

[Test the connection in streamLytics](#)

SoundCloud

A **single value** to provide: your SoundCloud **User ID** (a number). Streams and followers are then collected automatically.

1. Signed into SoundCloud, open soundcloud.com/discover.
2. View the page **source** (**Ctrl+U**), then search (**Ctrl+F**) for soundcloud:users: — the **number** right after is your **User ID** (e.g. 377065610).

Source → soundcloud:users:<your ID>

3. Paste this **User ID** into **API Credentials → SoundCloud**, then **Test the connection**.

Field	Example (format)	Note
User ID	377065610	the number found in the /discover page source

[Open the SoundCloud portal](#)

[Test the connection in streaMLytics](#)

Meta / Instagram

Meta is **configured at the platform level** (shared app). You provide **only your Ad Account ID**; the token, the app and Instagram are managed by the administrator.

1. Open the **Ads Manager** (adsmanager.facebook.com) and sign in. Pick the right account if you have several.
2. **Easiest method — via the URL.** Look at your browser's **address bar** (at the very top). The URL contains an **act=** parameter, for example: `adsmanager.facebook.com/adsmanager/manage/campaigns?act=123456789012345&business_id=...` Your **Ad Account ID** is the **number right after act=** and **before the next &**. Tip: double-click that number to select it, then **Ctrl+C**.

The number after act= in the address bar

3. Don't confuse it with `business_id=...` (your Business Manager) or an **ad set ID**: only the number after **act=** is correct.
4. Paste this number into **API Credentials → Meta / Instagram**, then **Test the connection**. (The `act_` prefix is added automatically.)

Field	Example (format)	Note
Ad Account ID	act_1234567890	the only field — number or 'act_'-prefixed

Note — **Admin prerequisite**: your ad account must be linked to the shared app (System User) in Business Manager for collection to work. Instagram is attached on the admin side.

[Open the Meta / Instagram portal](#)

Part 2 — CSV file import

Spotify for Artists

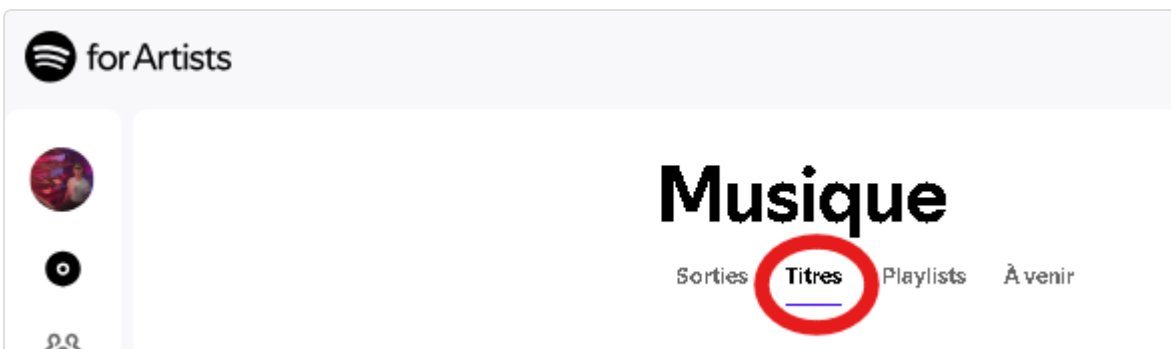

3 file types to export, **all with the « 12 months » filter**. For N tracks you get **N + 2 files** (N timelines + 1 summary + 1 audience). Example: 11 tracks → 13 files.

1. Sign in at artists.spotify.com and open the **Music** tab (disc icon, left sidebar).

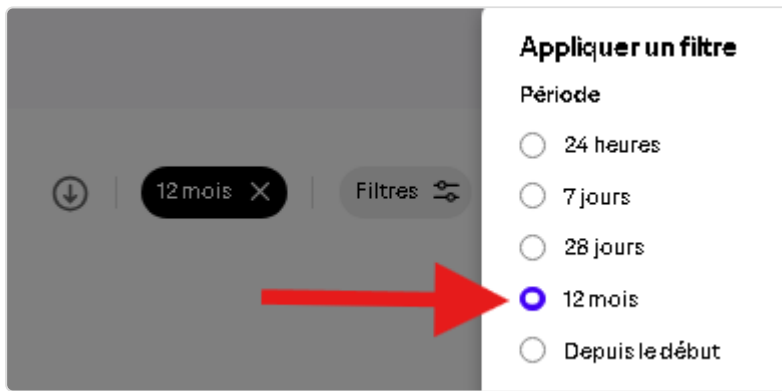

Sidebar → Music tab

2. Click the **Songs** sub-tab.

Music → Songs

3. Open **Filters** and set the period to **12 months**.

Period filter → 12 months

4. Click the **download** icon (↓) left of the filter: you get the ...-songs-1year.csv summary (listeners, streams, saves, release date per song).

Download the songs summary

5. For per-track timelines: in the list, **open a song** (click its row).

for Artists

Musique

Sorties Titres Playlists À venir

Rechercher

N°	Titre	Streams	Auditeurs	Vues de Couvertures	Sauvegardés	Première sortie
1	Je ne parle pas très bien le français - Original	253	180	21	6	12avr. 2024
2	Qu'a-t-elle creusé du seloon?	136	87	24	—	2 août 2024
3	Ô Chiotte l'arbitre Tacome Beck - Original	128	81	24	—	30 août 2024
4	Kimono à semelle de fer	105	62	—	—	25 août 2023
5	Ce te dérange pas si je joue avec ton tepis?	27	25	4	5	16 mars 2024

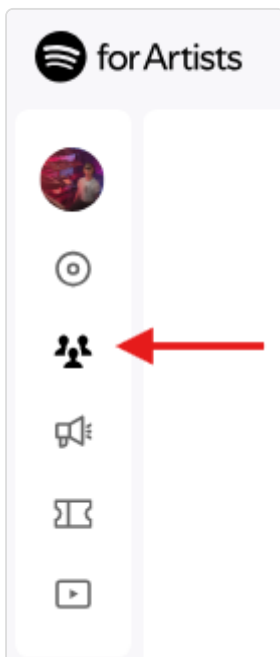

Song list → open a song

6. On the song page, set the filter to **12 months** then click **download** (↓): <song>-timeline.csv (daily streams). Repeat for **each** song.

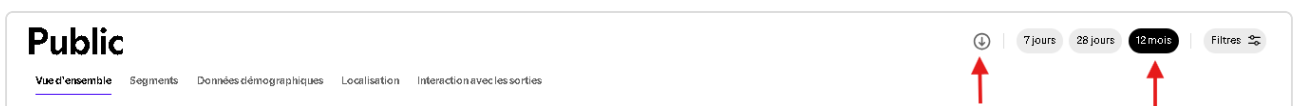

Song page → 12 months → download

7. Open the **Audience** tab (audience icon, left sidebar).

Sidebar → Audience tab

8. On **Overview**, **12 months** filter, click **download** (↓): ...-audience-timeline.csv (artist-level listeners/streams/followers).

Audience → Overview → download

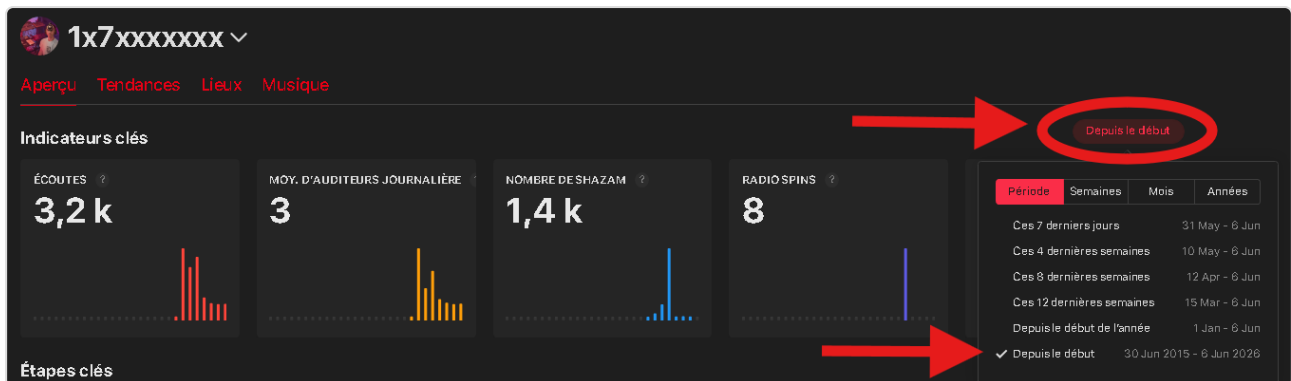

9. Do **not** use the « All time » filter for the summary: Spotify returns 0 listeners and saves there. The ...-songs-all.csv file is also rejected on import.

File	Expected name	Columns
Per-track timeline	<song>-timeline.csv	date, streams
Songs summary (12 months)	...-songs-1year.csv	song, listeners, streams, saves, release_date
Audience	...-audience-timeline.csv	date, listeners, streams, followers, playlist adds, saves

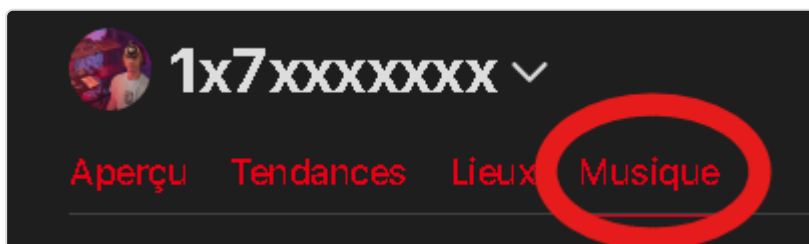

Apple Music for Artists

Apple Music for Artists has no API: the per-song performance CSV export is the only source (**a single file**). Make sure to set the period to **All Time** for a complete history. FR and EN headers are both recognized.

1. Sign in at artists.apple.com, pick your artist, then on the **Overview** tab set the period selector (top right) to **All Time**.

2. Click the **Music** tab.

Music tab

3. In the **Songs** section, click **See All** (top right).

MORCEAU	ÉCOUTES	MOY. D'AUDITEURS JOURNALIÈRE	ACHATS	NOMBRE DE SHAZAM	RADIO SPINS

iMusician (distributor)

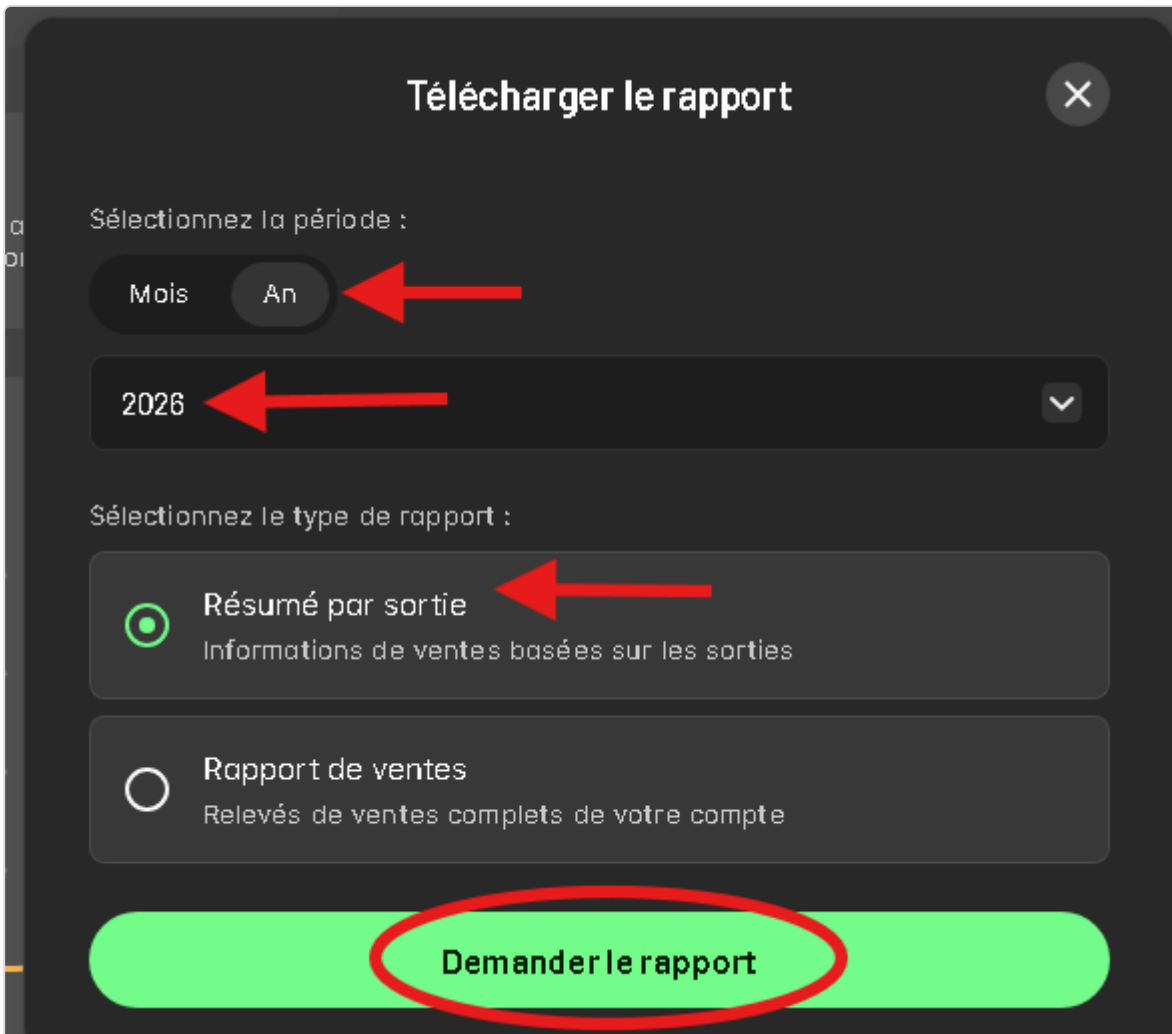

Two report types, requested **per year** (iterate over every year of your catalogue): the **release summary** (monthly totals per release) and the **sales report** (detail per ISRC/shop/country). The importer auto-detects each type.

1. **Revenue** tab (sidebar) → **Reports** → click **Download report** (top right).

Revenue → Reports → Download report

2. Period **Year**, select a **year**, type **Release summary**, then **Request report**. Repeat for **each year**.

Year → year → Release summary → Request

3. Do it again choosing **Sales report** (for each year as well).

Release summary	*.csv	Statement date, Release title, Track streams, Total revenue
Sales report	*.csv	Sales date, ISRC, Shop, Revenue EUR

DistroKid (distributor)

A single export covers your whole history: the detailed **Bank** report (one row per platform × title × country × month, amounts in **USD** — the USD→EUR conversion rate is set at import time). Format .tsv or .csv, both are auto-detected.

1. Sign in at distrokid.com → **Bank** menu — that's your earnings page.
2. At the bottom of the page, click « **SEE EXCRUCIATING DETAIL** » — the full row-by-row breakdown.
3. Click **Download** to get the file. Above 50,000 rows, DistroKid asks you to filter (period / platform / release) before generating the export — repeat as needed.
4. Import the file here as-is (.tsv or .csv) and adjust the suggested **USD→EUR rate** before confirming.

File	Expected name	Columns
Bank details (earnings breakdown)	*.tsv / *.csv	Sale Month, Store, Title, ISRC, Quantity, Earnings (USD)
