

Getting started with streaMLytics — API & CSV

This guide covers both data sources: **(1) the API connectors**, to fill in on the « API Credentials » page, and **(2) CSV file import**, via the « Add my numbers » page. The outline below lists the platforms covered.

By the end of this guide you will have:

- your accounts connected, and data arriving every night without you coming back to it;
- your Spotify and Apple listens visible on the dashboard;
- what you need to tie promo spend to the listens it produces.

1. Part 1 — API connectors

- Spotify
- YouTube
- SoundCloud
- Meta / Instagram

2. Part 2 — CSV file import

- Spotify for Artists
- Apple Music for Artists
- iMusician (distributor)
- DistroKid (distributor)

Part 1 — API connectors

Spotify

One single value to paste: the link to your Spotify Artist page.

1. On Spotify, open **your artist page** → ... → **Share** → **Copy link to artist**.
2. Paste it below → **Save**. We extract the ID automatically — no need to cut it up.

Field	Example (format)	Note
Spotify Artist ID or URL	https://open.spotify.com/artist/3TVXtAsR1Inumwj472S9r4	paste the full URL of your artist page — we extract the id

[Open the Spotify portal](#)[Test the connection in streaMLytics](#)

YouTube

2 values to grab: the **API key** (YouTube Data API v3) and your **channel ID**.

1. At console.cloud.google.com/apis/dashboard, create (or select) a project, then click **+ Enable APIs and services**.

APIs & services → Enable APIs

2. In the [API Library](#), search for **YouTube Data API v3**.

Library → search the API

3. Click the **YouTube Data API v3** result.

Select the API

4. Click **Enable**; the product page should show **API enabled**.

API enabled

5. Go to [Credentials](#) → **Create credentials** → **API key**, then **Show key** and copy it.

Credentials → API key → Show key

6. Get the **Channel ID**: at youtube.com/account/advanced → **Channel ID** → **Copy** (starts with UC...).

YouTube → Advanced settings → Channel ID

7. Paste the **API key** + the **Channel ID** into **API Credentials** → **YouTube**.

Field	Example (format)	Note
API Key	AIzaSyA1B2c3D4e5F6g7H8i9J0kLmNoPqRsTuVwX	starts with 'Alza', ~39 characters
Channel ID	UC_x5XG10V2P6uZZ5FSM9Ttw	starts with 'UC', 24 characters

Note — Free quota ~10,000 units/day; exceeding it returns 403 (temporary).

[Open the YouTube portal](#)

[Test the connection in streaMLytics](#)

SoundCloud

A **single thing** to provide: the **link to your SoundCloud profile**. We derive your identifier from it; streams and followers are then collected automatically.

1. Open your **SoundCloud profile** and copy the address shown in the browser bar — it looks like `https://soundcloud.com/your-name`.

2. Paste that link into **API Credentials** → **SoundCloud**, then **Save**. Your User ID is looked up automatically and shown back to you as confirmation.

Field	Example (format)	Note
SoundCloud profile	<code>https://soundcloud.com/your-name</code>	your page link; the numeric User ID is derived from it

[Open the SoundCloud portal](#)

[Test the connection in streaMLytics](#)

Meta / Instagram

Meta is **configured at the platform level** (shared app). You provide **only your Ad Account ID**; the token, the app and Instagram are managed by the administrator.

1. Open the **Ads Manager** (adsmanager.facebook.com) and sign in. Pick the right account if you have several.
2. **Easiest method — via the URL.** Look at your browser's **address bar** (at the very top). The URL contains an **act=** parameter, for example: `adsmanager.facebook.com/adsmanager/manage/campaigns?act=123456789012345&business_id=...` Your **Ad Account ID** is the **number right after act=** and **before the next &**. Tip: double-click that number to select it, then **Ctrl+C** (Mac : **Cmd+C** (**⌘C**)).

The number after act= in the address bar

3. Don't confuse it with `business_id=...` (your Business Manager) or an **ad set ID**: only the number after **act=** is correct.
4. **Required, and it is yours to do.** Until this account is shared, collection sees nothing — even with the right ID. In **Business Manager** → **Settings** → **Apps**, find **ETL_DASHBOARD_SPOTIFY** (ask us to add it if it is not there), then **Business Assets** → **Add Assets** → **Ad Account**: pick yours and grant **Analyst** (or Advertiser) permission.
5. Paste this number into **API Credentials** → **Meta / Instagram**, then **Test the connection**. (The `act_` prefix is added automatically.)
6. **Instagram (optional but recommended).** To track followers and posts we need the **Instagram Business Account ID** — not your @handle. Open **Meta Business Suite** → **Settings** → **Accounts** → **Instagram accounts**, select your account: the **numeric ID** is shown under the name. Paste it into *Instagram Business Account ID*.
7. Instagram prerequisite: the account must be a **Business** or **Creator** account (not personal) linked to a **Facebook Page**. A personal account returns no statistics through the API.

Field	Example (format)	Note
Ad Account ID	act_1234567890	number or 'act_'-prefixed — for Meta Ads
Instagram Business Account ID	17841400000000000	optional — ~17 digits, for Instagram stats

[Open the Meta / Instagram portal](#)

[Test the connection in streaMLytics](#)

Part 2 — CSV file import

Spotify for Artists

3 file types to export, **all with the « 12 months » filter**. For N tracks you get **N + 2 files** (N timelines + 1 summary + 1 audience). Example: 11 tracks → 13 files.

1. Sign in at artists.spotify.com and open the **Music** tab (disc icon, left sidebar).

Sidebar → Music tab

2. Click the **Songs** sub-tab.

Music → Songs

3. Open **Filters** and set the period to **12 months**.

Period filter → 12 months

4. Click the **download** icon (↓) left of the filter: you get the ...- songs - 1year . csv summary (listeners, streams, saves, release date per song).

Download the songs summary

5. For per-track timelines: in the list, **open a song** (click its row).

for Artists

Sorties Titres Playlists À venir

Rechercher

N°	Titre	Streams	Auditeurs	Vues de Covers	Sauvegardés	Première sortie
1	Je ne parle pas très bien le français - Original	255	180	21	6	12 avr. 2024
2	Qu'est-ce que le crechoir du salon?	136	87	24	—	2 août 2024
3	O Chiotte l'artiste Tacome Beck - Original	128	81	24	—	30 août 2024
4	Kimono à semelle de fer	105	62	—	—	25 août 2023
5	Ce te dérange pas si je joue avec ton tapis?	27	25	4	6	16 mars 2024

Song list → open a song

6. On the song page, set the filter to **12 months** then click **download** (↓): <song>- timeline . csv (daily streams). Repeat for **each** song.

Song page → 12 months → download

7. Open the **Audience** tab (audience icon, left sidebar).

Sidebar → Audience tab

8. On **Overview**, **12 months** filter, click **download** (↓): ...-audience-timeline.csv (artist-level listeners/streams/followers).

Audience → Overview → download

9. Do **not** use the « All time » filter for the summary: Spotify returns 0 listeners and saves there. The ...-songs-all.csv file is also rejected on import.

File	Expected name	Columns
Per-track timeline	<song>-timeline.csv	date, streams
Songs summary (12 months)	...-songs-1year.csv	song, listeners, streams, saves, release_date
Audience	...-audience-timeline.csv	date, listeners, streams, followers, playlist adds, saves

Apple Music for Artists

Apple Music for Artists has no API: the per-song performance CSV export is the only source (**a single file**). Make sure to set the period to **All Time** for a complete history. FR and EN headers are both recognized.

1. Sign in at artists.apple.com, pick your artist, then on the **Overview** tab set the period selector (top right) to **All Time**.

Overview → period → All Time

2. Click the **Music** tab.

Music tab

3. In the **Songs** section, click **See All** (top right).

MORCEAU	ÉCOUTES	MOY. D'AUDITEURS JOURNALIÈRE	ACHATS	NOMBRE DE SHAZAM	RADIO SPINS
Je ne parle pas très bien le français	562	1	0	250	0
Qui a bu le crachoir du saloon ?	477	1	0	475	0
Patte Velours 1ère vitesse	438	3	0	2	0
Qui a sali mon slip avec de la gadoue?	341	3	1	14	0
Ça te dérange passif je joue avec ton tapis? (Remix) REMIX	326	1	0	11	0

Songs → See All

4. Click the **download** icon (⌵, top right): you get `songs_... .csv` (Song, Plays, Avg. Listeners, Shazams, Radio Spins, Purchases).

iMusician (distributor)

Two report types, requested **per year** (iterate over every year of your catalogue): the **release summary** (monthly totals per release) and the **sales report** (detail per ISRC/shop/country). The importer auto-detects each type.

1. **Revenue** tab (sidebar) → **Reports** → click **Download report** (top right).

Revenue → Reports → Download report

2. Period **Year**, select a **year**, type **Release summary**, then **Request report**. Repeat for **each year**.

Year → year → Release summary → Request

3. Do it again choosing **Sales report** (for each year as well).

Release summary	*.csv	Statement date, Release title, Track streams, Total revenue
Sales report	*.csv	Sales date, ISRC, Shop, Revenue EUR

DistroKid (distributor)

A single export covers your whole history: the detailed **Bank** report (one row per platform × title × country × month, amounts in **USD** — the USD→EUR conversion rate is set at import time). Format .tsv or .csv, both are auto-detected.

1. Sign in at distrokid.com → **Bank** menu — that's your earnings page.
2. At the bottom of the page, click « **SEE EXCRUCIATING DETAIL** » — the full row-by-row breakdown.
3. Click **Download** to get the file. Above 50,000 rows, DistroKid asks you to filter (period / platform / release) before generating the export — repeat as needed.
4. Import the file here as-is (.tsv or .csv) and adjust the suggested **USD→EUR rate** before confirming.

File	Expected name	Columns
Bank details (earnings breakdown)	*.tsv / *.csv	Sale Month, Store, Title, ISRC, Quantity, Earnings (USD)
