

# Getting started with streamMLytics — API & CSV

This guide covers both data sources: **(1) the API connectors**, to fill in on the « API Credentials » page, and **(2) CSV file import**, via the « Add my numbers » page. The outline below lists the platforms covered.

## By the end of this guide you will have:

- your accounts connected, and data arriving every night without you coming back to it;
- your Spotify and Apple listens visible on the dashboard;
- what you need to tie promo spend to the listens it produces.

### 1. Part 1 — API connectors

- Spotify
- YouTube
- SoundCloud
- Meta Ads
- Instagram

### 2. Part 2 — CSV file import

- Spotify for Artists
- Apple Music for Artists
- iMusician (distributor)
- DistroKid (distributor)

# Part 1 — API connectors

## Spotify

1. ... button → **Share** → **Copy link to artist** → paste it into the **Artist profile URL** field, on the left.

The ... button → Share → Copy link to artist

### The values to paste:

#### • Artist profile URL

paste the full URL of your artist page — we extract the id

e.g. <https://open.spotify.com/artist/4qG1qjeHfkASTdyRGbLWbV> — sample format, do not copy it

[Open the Spotify portal](#)

[Test the connection in streaMLytics](#)

## YouTube

1. [youtube.com/account/advanced](https://youtube.com/account/advanced) → **Channel ID** → **Copy**, and paste it into the **Your YouTube channel link** field, on the left.

### The values to paste:

#### • Your YouTube channel link

the `UC...` id, a channel link or your @handle — we resolve it and show you what we found

e.g. [https://www.youtube.com/channel/UC\\_x5XG1OV2P6uZZ5FSM9Ttw](https://www.youtube.com/channel/UC_x5XG1OV2P6uZZ5FSM9Ttw) — sample format, do not copy it

Note — Free quota ~10,000 units/day; exceeding it returns 403 (temporary).

[Open the YouTube portal](#)

[Test the connection in streaMLytics](#)

## SoundCloud

---

1. Open your **SoundCloud profile** and copy the address shown in the browser bar — it looks like `https://soundcloud.com/your-name`.
2. Paste it into **Enter your credentials**, the left-hand column, then **Save**.

### The values to paste:

- **SoundCloud profile**

*your page link — nothing to cut out*

*e.g. `https://soundcloud.com/your-name` — sample format, do not copy it*

Open the SoundCloud portal

Test the connection in streamLytics

## Meta Ads

---

1. Pick your account (dropdown at the top of Meta) → **copy the URL** → paste it into the **Your ad account link** field, on the left.
2. [Partners](#) → **Add** → **Give a partner access to your assets** → paste **212173878482503** → tick your ad account → **Analyst** role. Without it, no data at all.

### The values to paste:

- **Your ad account link**

*paste the full Ads Manager URL — we extract the account number from it*

*e.g. `https://adsmanager.facebook.com/adsmanager/manage/campaigns?act=123456789012345` — sample format, do not copy it*

Open the Meta Ads portal

Test the connection in streamLytics

## Instagram

---

1. Paste your profile address into the **Your Instagram profile link** field, on the left. Your account must be **Business** or **Creator** — a personal account returns nothing. (Instagram → Settings → Account type)

### The values to paste:

- **Your Instagram profile link**

*we take it from there — nothing to look up in Business Manager*

*e.g. `https://instagram.com/your-handle` — sample format, do not copy it*

Open the Instagram portal

Test the connection in streamLytics

## Part 2 — CSV file import

## Spotify for Artists

3 file types to export, **all with the « 12 months » filter**. For N tracks you get **N + 2 files** (N timelines + 1 summary + 1 audience). Example: 11 tracks → 13 files.

1. Sign in at [artists.spotify.com](https://artists.spotify.com) and open the **Music** tab (disc icon, left sidebar).

Sidebar → Music tab

2. Click the **Songs** sub-tab.

Music → Songs

3. Open **Filters** and set the period to **12 months**.

Period filter → 12 months

4. Click the **download** icon (↓) left of the filter: you get the ...- songs - 1year . csv summary (listeners, streams, saves, release date per song).

Download the songs summary

5. For per-track timelines: in the list, **open a song** (click its row).

| N° | Titre                                            | Streams | Auditeurs | Vues de Covers | Sauvegardés | Première sortie |
|----|--------------------------------------------------|---------|-----------|----------------|-------------|-----------------|
| 1  | Je ne parle pas très bien le français - Original | 255     | 180       | 21             | 6           | 12 avr. 2024    |
| 2  | Qu'est-ce que le crocheteur du salon?            | 136     | 67        | 24             | —           | 2 août 2024     |
| 3  | O Chiotte l'entête Tacome Beck - Original        | 128     | 61        | 24             | —           | 30 août 2024    |
| 4  | Kimono à semelle de fer                          | 105     | 62        | —              | —           | 25 août 2023    |
| 5  | Ce te dérange pas si je joue avec ton tapis?     | 27      | 25        | 4              | 6           | 16 mars 2024    |

Song list → open a song

6. On the song page, set the filter to **12 months** then click **download** (↓): <song>- timeline . csv (daily streams). Repeat for **each** song.

Song page → 12 months → download

7. Open the **Audience** tab (audience icon, left sidebar).

Sidebar → Audience tab

8. On **Overview**, **12 months** filter, click **download** (↓): ...-audience-timeline.csv (artist-level listeners/streams/followers).

Audience → Overview → download

9. Do **not** use the « All time » filter for the summary: Spotify returns 0 listeners and saves there. The ...-songs-all.csv file is also rejected on import.

| File                      | Expected name             | Columns                                                   |

| Audience                  | ...-audience-timeline.csv | date, listeners, streams, followers, playlist adds, saves |

## Apple Music for Artists

Apple Music for Artists has no API: the per-song performance CSV export is the only source. Start with the **Since the beginning** period — that is your total. **One export per year gives you far more.** Export again with the period set to **2023**, then **2024**, then **2025**, and upload all three: Apple stops being a single frozen number and joins the other platforms when you filter by period. You have nothing to type — Apple writes the dates in the filename (songs\_...\_2024-01-01\_2024-12-31.csv) and we read them. **So do not rename the file**; if it has lost its dates, the app will ask you for the period. FR and EN headers recognised.

1. Sign in at artists.apple.com, pick your artist, then on the **Overview** tab set the period selector (top right) to **All Time**.

Overview → period → All Time

2. Click the **Music** tab.

Music tab

3. In the **Songs** section, click **See All** (top right).

## iMusician (distributor)

Two report types, requested **per year** (iterate over every year of your catalogue): the **release summary** (monthly totals per release) and the **sales report** (detail per ISRC/shop/country). The importer auto-detects each type.

1. **Revenue** tab (sidebar) → **Reports** → click **Download report** (top right).

Revenue → Reports → Download report

2. Period **Year**, select a **year**, type **Release summary**, then **Request report**. Repeat for **each year**.

A screenshot of the 'Télécharger le rapport' (Download report) modal. It has a title bar with a close button. The form contains two sections. The first section, 'Sélectionnez la période :', has two radio buttons: 'Mois' and 'An', with 'An' selected and highlighted by a red arrow. Below this is a dropdown menu showing '2026', also highlighted by a red arrow. The second section, 'Sélectionnez le type de rapport :', has two options: 'Résumé par sortie' (selected with a green radio button and highlighted by a red arrow) and 'Rapport de ventes'. The 'Résumé par sortie' option has a description: 'Informations de ventes basées sur les sorties'. The 'Rapport de ventes' option has a description: 'Relevés de ventes complets de votre compte'. At the bottom, there is a large green button labeled 'Demander le rapport', which is circled in red.

Year → year → Release summary → Request

3. Do it again choosing **Sales report** (for each year as well).

## DistroKid (distributor)

---

A single export covers your whole history: the detailed **Bank** report (one row per platform × title × country × month, amounts in **USD** — the USD→EUR conversion rate is set at import time). Format .tsv or .csv, both are auto-detected.

1. Sign in at distrokid.com → **Bank** menu — that's your earnings page.
2. At the bottom of the page, click « **SEE EXCRUCIATING DETAIL** » — the full row-by-row breakdown.
3. Click **Download** to get the file. Above 50,000 rows, DistroKid asks you to filter (period / platform / release) before generating the export — repeat as needed.
4. Import the file here as-is (.tsv or .csv) and adjust the suggested **USD→EUR rate** before confirming.

| File                              | Expected name | Columns                                                  |
|-----------------------------------|---------------|----------------------------------------------------------|
| Bank details (earnings breakdown) | *.tsv / *.csv | Sale Month, Store, Title, ISRC, Quantity, Earnings (USD) |
