

Getting started with streaMLytics — API & CSV

This guide covers both data sources: **(1) the API connectors**, to fill in on the « API Credentials » page, and **(2) CSV file import**, via the « Add my numbers » page. The outline below lists the platforms covered.

By the end of this guide you will have:

- your accounts connected, and data arriving every night without you coming back to it;
- your Spotify and Apple listens visible on the dashboard;
- what you need to tie promo spend to the listens it produces.

1. Part 1 — API connectors

- Spotify
- YouTube
- SoundCloud
- Meta / Instagram

2. Part 2 — CSV file import

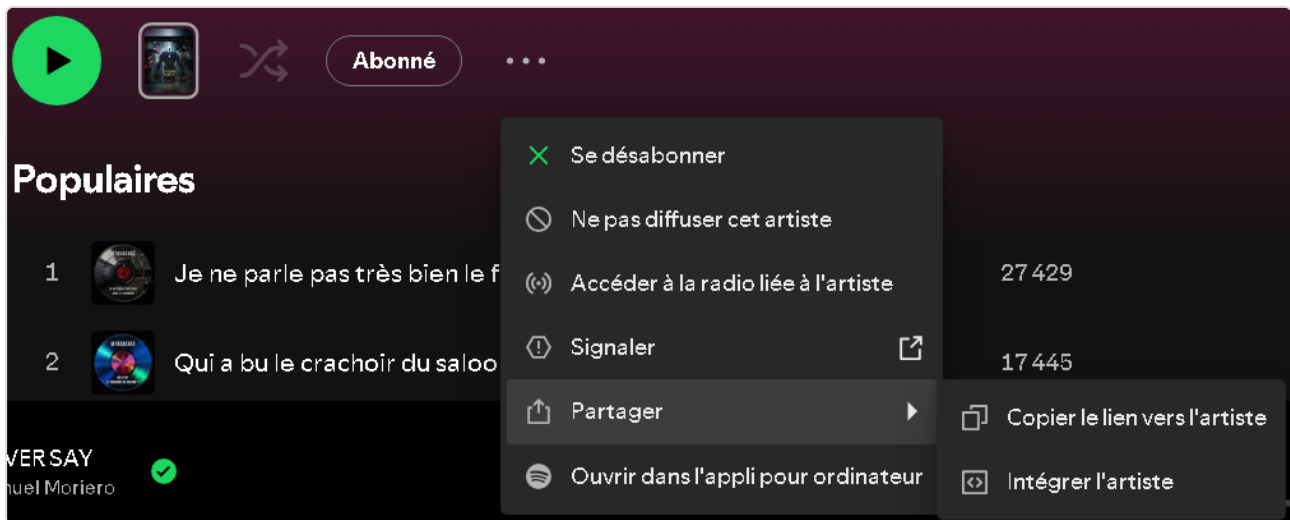

- Spotify for Artists
- Apple Music for Artists
- iMusician (distributor)
- DistroKid (distributor)

Part 1 — API connectors

Spotify

One single value to paste: the link to your Spotify Artist page.

1. On Spotify, open **your artist page**, then click the **•••** button — the **three dots**, to the right of the *Follow / Following* button.

The **•••** button → Share → Copy link to artist

2. In the menu that opens: **Share** → **Copy link to artist**.

3. Paste the link into the **Spotify Artist ID or profile URL** field, then **Save**.

The values to paste:

- **Spotify Artist ID or profile URL**

paste the full URL of your artist page — we extract the id

e.g. <https://open.spotify.com/artist/3TVXtAsR1Inumwj472S9r4> — sample format, do not copy it

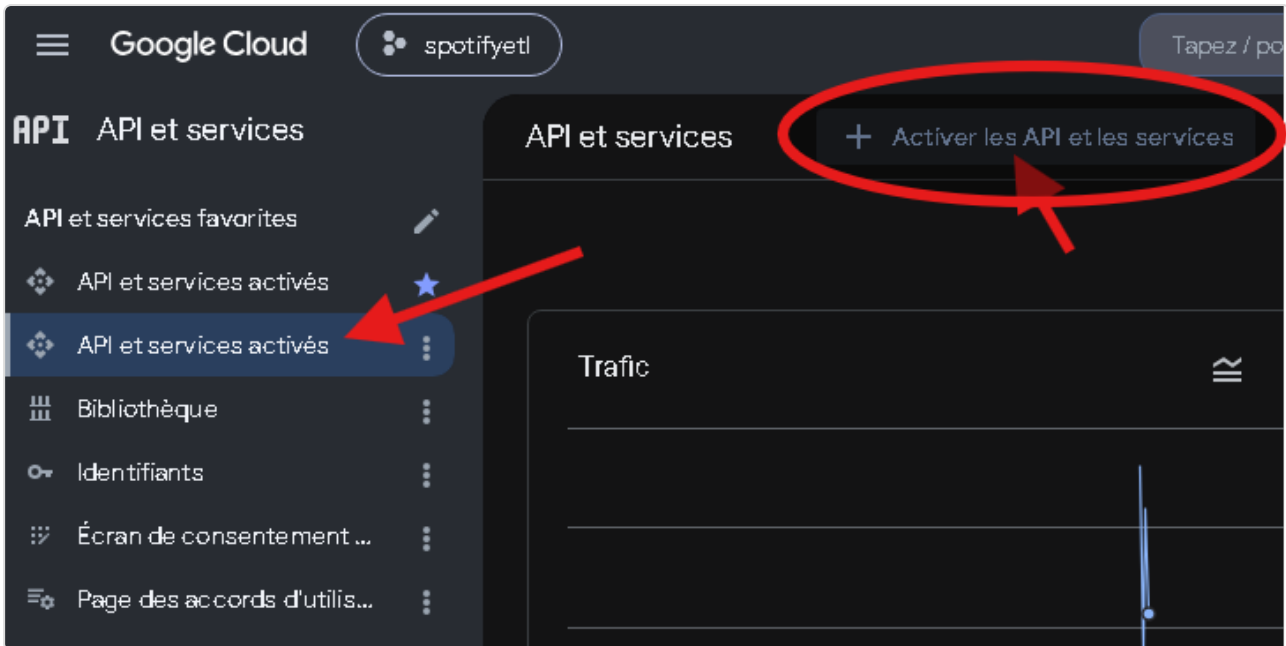

[Open the Spotify portal](#)

[Test the connection in streamLytics](#)

YouTube

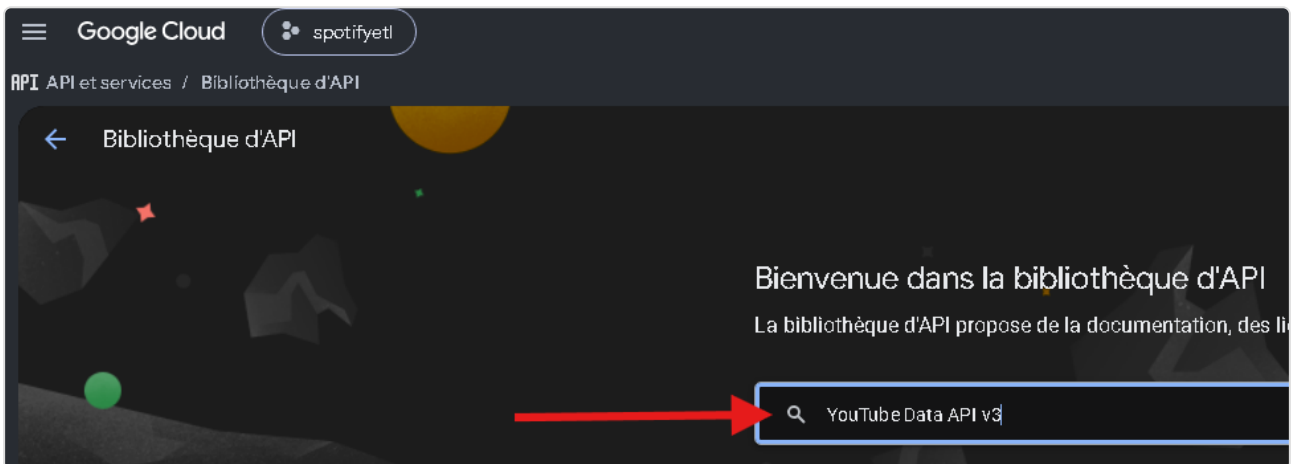

2 values to grab: the **API key** (YouTube Data API v3) and your **channel ID**.

1. At console.cloud.google.com/apis/dashboard, create (or select) a project, then click **+ Enable APIs and services**.

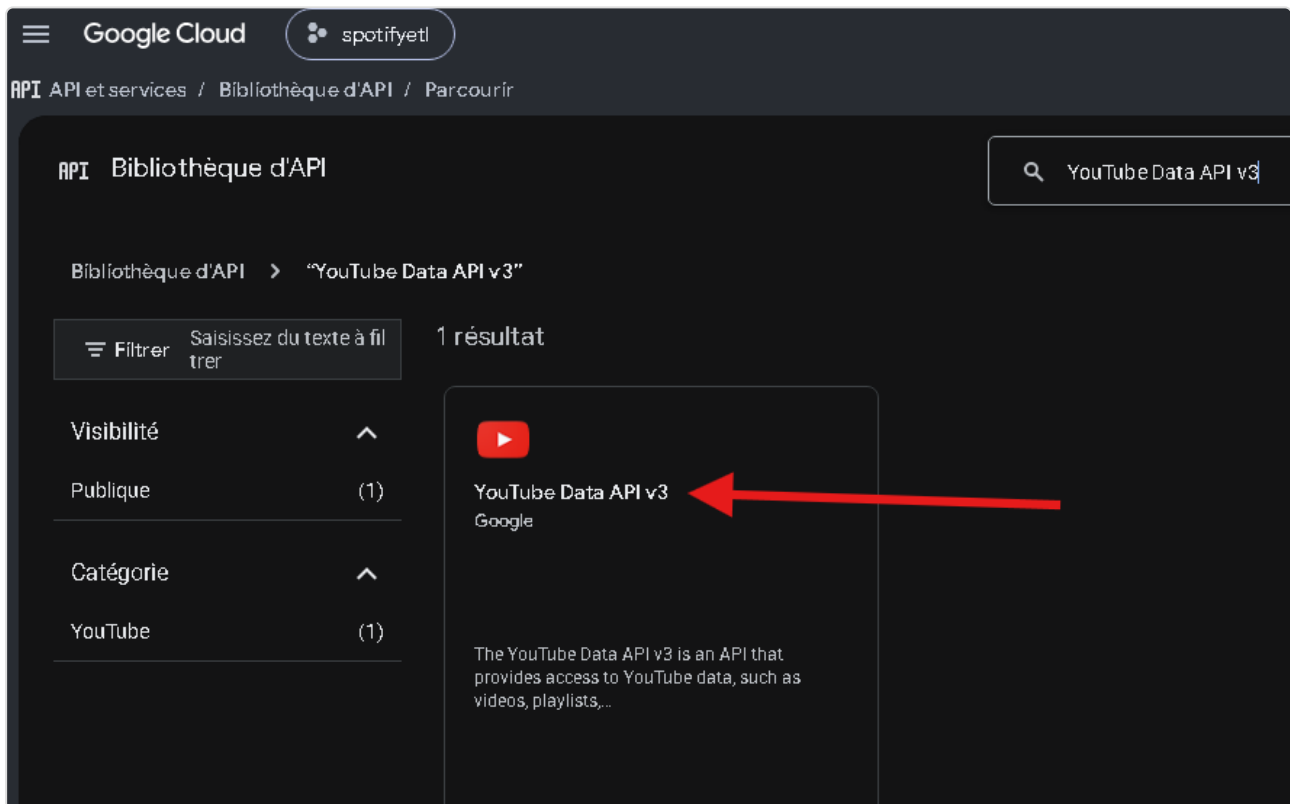

APIs & services → Enable APIs

2. In the [API Library](#), search for **YouTube Data API v3**.

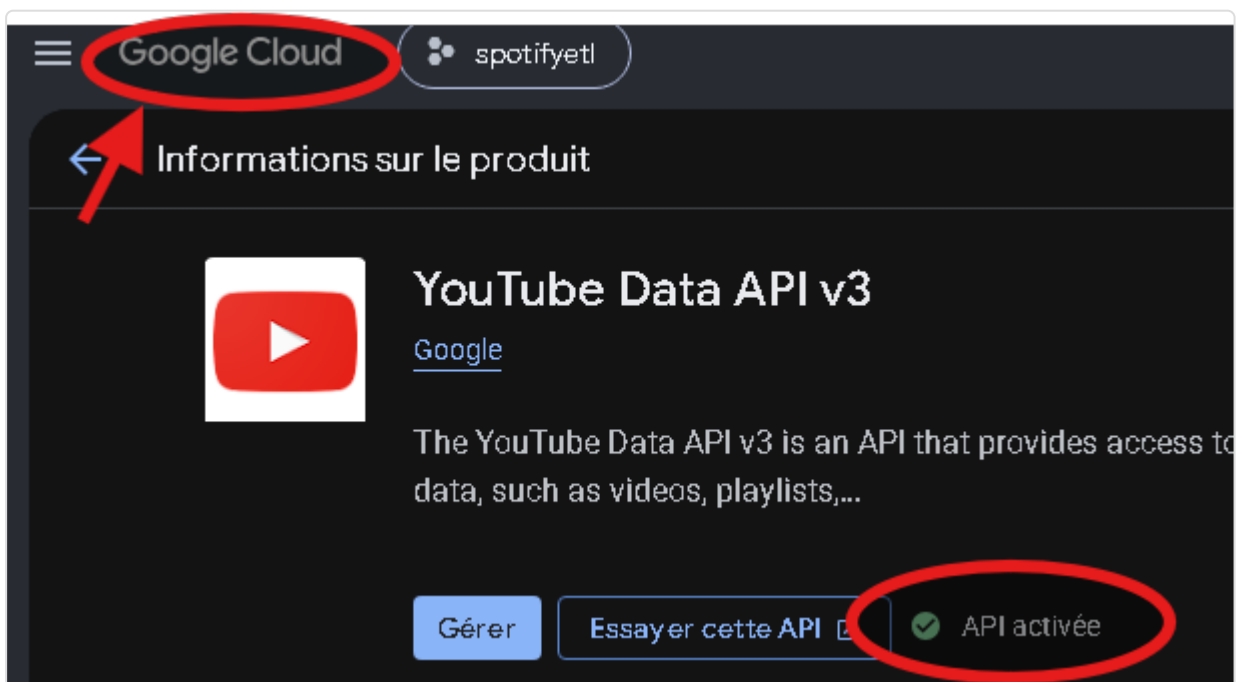

Library → search the API

3. Click the **YouTube Data API v3** result.

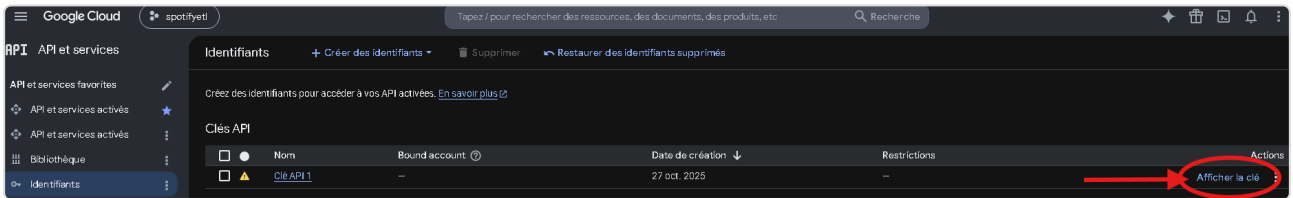

Select the API

4. Click **Enable**; the product page should show **API enabled**.

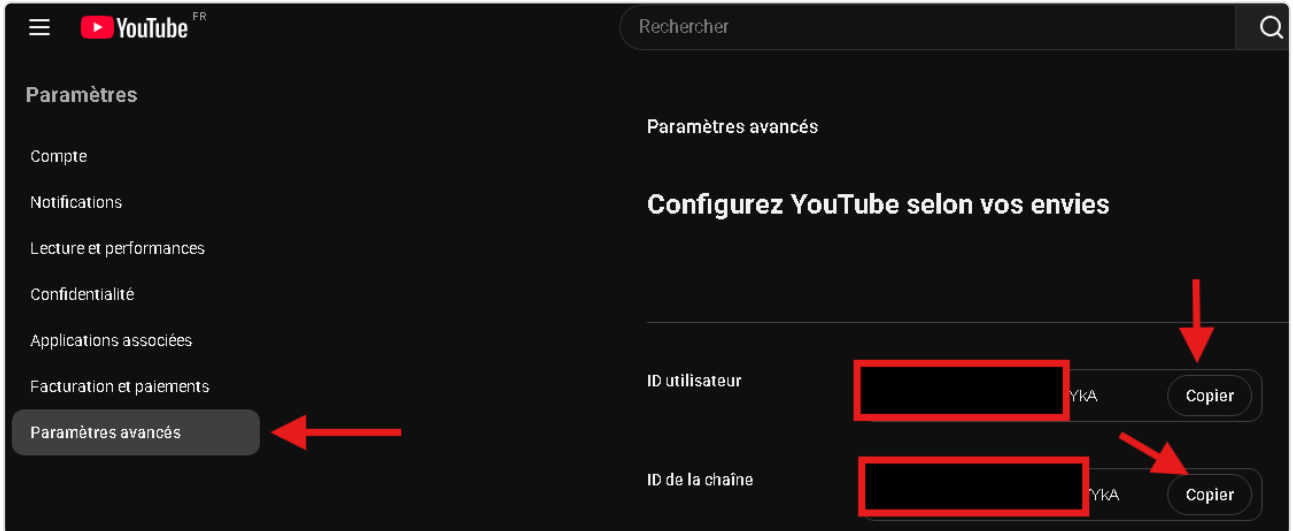

API enabled

5. Go to [Credentials](#) → **Create credentials** → **API key**, then **Show key** and copy it.

Credentials → API key → Show key

6. Get the **Channel ID**: at youtube.com/account/advanced → **Channel ID** → **Copy** (starts with UC...).

YouTube → Advanced settings → Channel ID

7. Paste the **API key** + the **Channel ID** into **API Credentials** → **YouTube**.

The values to paste:

- **API Key**

starts with 'Alza', ~39 characters

e.g. AlzaSyA1B2c3D4e5F6g7H8i9J0kLmNoPqRsTuVwX — sample format, do not copy it

- **Channel ID**

starts with 'UC', 24 characters

e.g. UC_x5XG1OV2P6uZZ5FSM9Ttw — sample format, do not copy it

Note — Free quota ~10,000 units/day; exceeding it returns 403 (temporary).

[Open the YouTube portal](#)

[Test the connection in streaMLytics](#)

SoundCloud

1. Open your **SoundCloud profile** and copy the address shown in the browser bar — it looks like `https://soundcloud.com/your-name`.
2. Paste it into **Enter your credentials**, the left-hand column, then **Save**.

The values to paste:

- **SoundCloud profile**

your page link — nothing to cut out

e.g. `https://soundcloud.com/your-name` — sample format, do not copy it

Open the SoundCloud portal

Test the connection in streaMLytics

Meta / Instagram

Meta is **configured at the platform level** (shared app). You provide **only your Ad Account ID**; the token, the app and Instagram are managed by the administrator.

1. Open the portal above and sign in. If you manage **several ad accounts**, pick the one you want to track first: that is the one the address will name.

2. **Simplest: copy the whole address.** Click your browser's **address bar** (at the very top), copy all of it, and paste it as-is — we extract the account number from it. `adsmanager.facebook.com/adsmanager/manage/campaigns?act=123456789012345&business_id=...` If you would rather paste the number only, take the one right after **act=**, stopping at the **&**. **With or without the act_ prefix, both work:** `act_123456789012345` and `123456789012345` are accepted identically.

The number after act= in the address bar

3. Don't confuse it with `business_id=...` (your Business Manager) or an **ad set ID**: only the number after **act=** is correct.

4. **Required, and it is yours to do.** Until this account is shared, collection sees nothing — even with the right ID. Open [Business Manager](#) → [Apps](#) and look for **ETL_DASHBOARD_SPOTIFY** — that is the name **our application goes by on Meta**; if it is not in the list, ask us to add it. Then, in [Ad accounts](#) → **Add people / apps**, pick yours and grant **Analyst** (or Advertiser) permission.

5. Paste the value into the **Ad Account ID** field, then **Save** — the connection is tested right after. A here almost always points back to the sharing step above.

6. **Instagram (optional but recommended).** To track followers and posts we need the **Instagram Business Account ID** — not your @handle. Open **Meta Business Suite** → **Settings** → **Accounts** → **Instagram accounts**, select your account: the **numeric ID** is shown under the name. Paste it into *Instagram Business Account ID*.

7. Instagram prerequisite: the account must be a **Business** or **Creator** account (not personal) linked to a **Facebook Page**. A personal account returns no statistics through the API.

The values to paste:

- **Ad Account ID (act_... or numeric)**

the full Ads Manager URL works too — `act\_1234567890` and `1234567890` are accepted identically

e.g. `act_1234567890` — sample format, do not copy it

- **Instagram Business Account ID**

optional — ~17 digits, for Instagram stats

e.g. `17841400000000000` — sample format, do not copy it

[Open the Meta / Instagram portal](#)

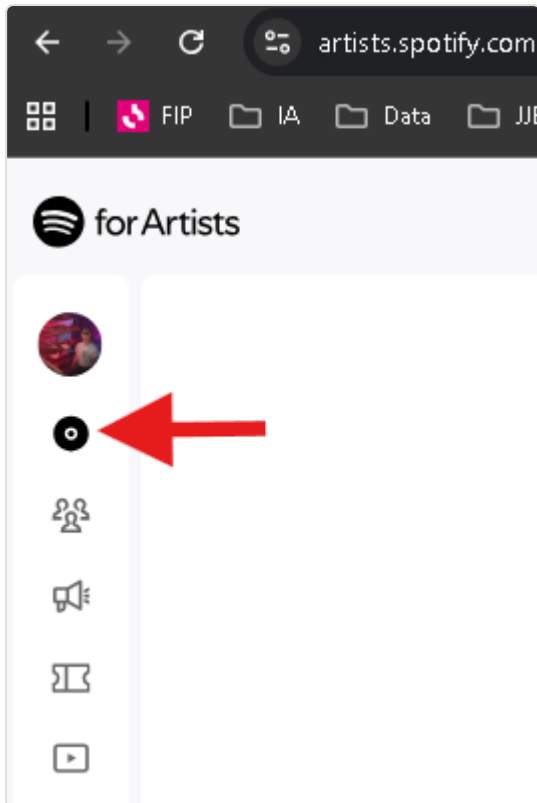

[Test the connection in streaMLytics](#)

Part 2 — CSV file import

Spotify for Artists

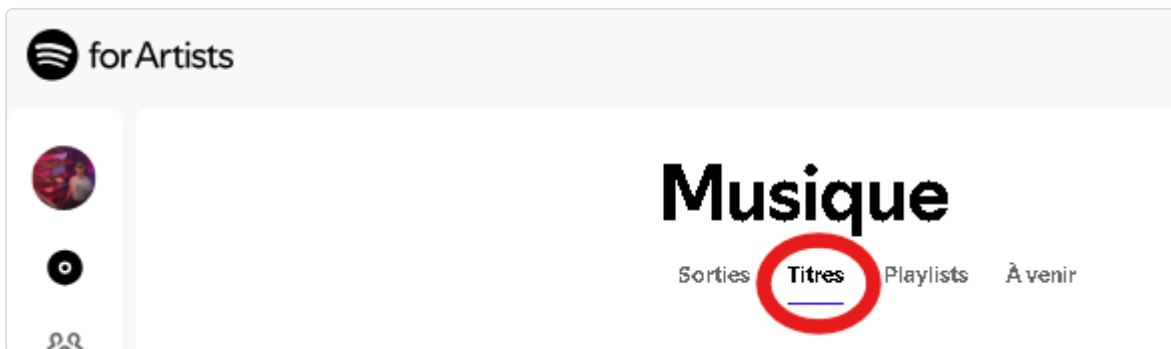

3 file types to export, **all with the « 12 months » filter**. For N tracks you get **N + 2 files** (N timelines + 1 summary + 1 audience). Example: 11 tracks → 13 files.

1. Sign in at artists.spotify.com and open the **Music** tab (disc icon, left sidebar).

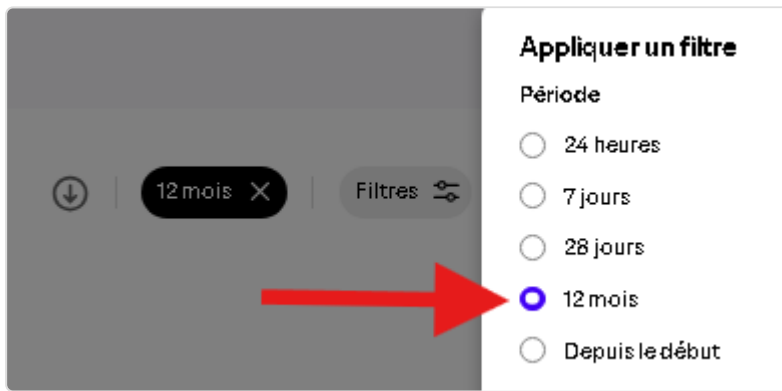

Sidebar → Music tab

2. Click the **Songs** sub-tab.

Music → Songs

3. Open **Filters** and set the period to **12 months**.

Period filter → 12 months

4. Click the **download** icon (↓) left of the filter: you get the ...- songs - 1year . csv summary (listeners, streams, saves, release date per song).

Download the songs summary

5. For per-track timelines: in the list, **open a song** (click its row).

for Artists

Musique

Sorties Titres Playlists À venir

Rechercher

N°	Titre	Streams	Auditeurs	Vues de Clips	Sauvegardés	Première sortie
1	Je ne parle pas très bien le français - Original	255	180	21	6	12 avr. 2024
2	Qu'est-ce que le crocheteur du salon?	136	67	24	—	2 août 2024
3	O Chiotte l'entête Tacome Beck - Original	128	61	24	—	30 août 2024
4	Kimono à semelle de fer	105	62	—	—	25 août 2023
5	Ce te dérange pas si je joue avec ton tapis?	27	25	4	6	16 mars 2024

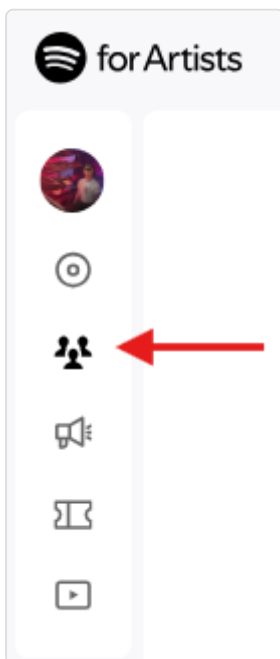

Song list → open a song

6. On the song page, set the filter to **12 months** then click **download** (↓): <song>- timeline . csv (daily streams). Repeat for **each** song.

Song page → 12 months → download

7. Open the **Audience** tab (audience icon, left sidebar).

Sidebar → Audience tab

8. On **Overview**, **12 months** filter, click **download** (↓): ...-audience-timeline.csv (artist-level listeners/streams/followers).

Audience → Overview → download

9. Do **not** use the « All time » filter for the summary: Spotify returns 0 listeners and saves there. The ...-songs-all.csv file is also rejected on import.

File	Expected name	Columns
Per-track timeline	<song>-timeline.csv	date, streams
Songs summary (12 months)	...-songs-1year.csv	song, listeners, streams, saves, release_date
Audience	...-audience-timeline.csv	date, listeners, streams, followers, playlist adds, saves

Apple Music for Artists

Apple Music for Artists has no API: the per-song performance CSV export is the only source (**a single file**). Make sure to set the period to **All Time** for a complete history. FR and EN headers are both recognized.

1. Sign in at artists.apple.com, pick your artist, then on the **Overview** tab set the period selector (top right) to **All Time**.

The screenshot shows the 'Overview' tab for an artist. The 'Période' dropdown is set to 'Depuis le début'. The 'Écoutes' (Streams) are 3,2k, 'Moy. d'auditeurs journalière' (Avg. Daily Listeners) is 3, 'Nombre de Shazam' (Shazams) is 1,4k, and 'Radio Spins' is 8. The 'Étapes clés' (Key Moments) section shows 'Depuis le début' (30 Jun 2015 - 6 Jun 2026).

Overview → period → All Time

2. Click the **Music** tab.

The screenshot shows the 'Music' tab selected. The 'Musique' tab is highlighted with a red circle.

Music tab

3. In the **Songs** section, click **See All** (top right).

The screenshot shows the 'Songs' section with 11 tracks. The 'Tout afficher' button is highlighted with a red circle.

MORCEAU	ÉCOUTES	MOY. D'AUDITEURS JOURNALIÈRE	ACHATS	NOMBRE DE SHAZAM	RADIO SPINS
Je ne parle pas très bien le français	562	1	0	250	0
Qui a bu le crachoir du saloon ?	477	1	0	475	0

iMusician (distributor)

Two report types, requested **per year** (iterate over every year of your catalogue): the **release summary** (monthly totals per release) and the **sales report** (detail per ISRC/shop/country). The importer auto-detects each type.

1. **Revenue** tab (sidebar) → **Reports** → click **Download report** (top right).

Revenue → Reports → Download report

2. Period **Year**, select a **year**, type **Release summary**, then **Request report**. Repeat for **each year**.

A screenshot of the 'Télécharger le rapport' modal. It has a title bar with a close button. The form contains two sections. The first section, 'Sélectionnez la période :', has two radio buttons: 'Mois' and 'An', with 'An' selected and highlighted by a red arrow. Below this is a dropdown menu showing '2026', also highlighted by a red arrow. The second section, 'Sélectionnez le type de rapport :', has two options: 'Résumé par sortie' (selected with a green radio button and highlighted by a red arrow) and 'Rapport de ventes'. The 'Résumé par sortie' option has a description: 'Informations de ventes basées sur les sorties'. The 'Rapport de ventes' option has a description: 'Relevés de ventes complets de votre compte'. At the bottom, there is a large green button labeled 'Demander le rapport', which is circled in red.

Year → year → Release summary → Request

3. Do it again choosing **Sales report** (for each year as well).

DistroKid (distributor)

A single export covers your whole history: the detailed **Bank** report (one row per platform × title × country × month, amounts in **USD** — the USD→EUR conversion rate is set at import time). Format .tsv or .csv, both are auto-detected.

1. Sign in at distrokid.com → **Bank** menu — that's your earnings page.
2. At the bottom of the page, click « **SEE EXCRUCIATING DETAIL** » — the full row-by-row breakdown.
3. Click **Download** to get the file. Above 50,000 rows, DistroKid asks you to filter (period / platform / release) before generating the export — repeat as needed.
4. Import the file here as-is (.tsv or .csv) and adjust the suggested **USD→EUR rate** before confirming.

File	Expected name	Columns
Bank details (earnings breakdown)	*.tsv / *.csv	Sale Month, Store, Title, ISRC, Quantity, Earnings (USD)
