

Getting started with streaMLytics — API & CSV

This guide covers both data sources: **(1) the API connectors**, to fill in on the « API Credentials » page, and **(2) CSV file import**, via the « Add my numbers » page. The outline below lists the platforms covered.

By the end of this guide you will have:

- your accounts connected, and data arriving every night without you coming back to it;
- your Spotify and Apple listens visible on the dashboard;
- what you need to tie promo spend to the listens it produces.

1. Part 1 — API connectors

- Spotify
- YouTube
- SoundCloud
- Meta Ads / Insta

2. Part 2 — CSV file import

- Spotify for Artists
- Apple Music for Artists
- iMusician (distributor)
- DistroKid (distributor)

Part 1 — API connectors

Spotify

1. ... button → **Share** → **Copy link to artist** → paste it into **Artist profile URL**, above.

The ... button → Share → Copy link to artist

The values to paste:

• Artist profile URL

paste the full URL of your artist page — we extract the id

e.g. <https://open.spotify.com/artist/4qG1qjeHfkASTdyRGbLWbV> — sample format, do not copy it

[Open the Spotify portal](#)

[Test the connection in streamLytics](#)

YouTube

2 values to grab: the **API key** (YouTube Data API v3) and your **channel ID**.

1. At console.cloud.google.com/apis/dashboard, create (or select) a project, then click **+ Enable APIs and services**.

APIs & services → Enable APIs

2. In the [API Library](#), search for **YouTube Data API v3**.

Library → search the API

3. Click the **YouTube Data API v3** result.

Select the API

4. Click **Enable**; the product page should show **API enabled**.

API enabled

5. Go to [Credentials](#) → **Create credentials** → **API key**, then **Show key** and copy it.

Credentials → API key → Show key

6. Get the **Channel ID**: at youtube.com/account_advanced → **Channel ID** → **Copy** (starts with UC...).

YouTube → Advanced settings → Channel ID

7. Paste the **API key** + the **Channel ID** into **API Credentials** → **YouTube**.

The values to paste:

- **API Key**

starts with 'Alza', ~39 characters

e.g. AlzaSyA1B2c3D4e5F6g7H8i9J0kLmNoPqRsTuVwX — sample format, do not copy it

- **Channel ID**

starts with 'UC', 24 characters

e.g. UC_x5XG1OV2P6uZZ5FSM9Ttw — sample format, do not copy it

Note — Free quota ~10,000 units/day; exceeding it returns 403 (temporary).

[Open the YouTube portal](#)

[Test the connection in streaMLytics](#)

SoundCloud

1. Open your **SoundCloud profile** and copy the address shown in the browser bar — it looks like `https://soundcloud.com/your-name`.
2. Paste it into **Enter your credentials**, the left-hand column, then **Save**.

The values to paste:

- **SoundCloud profile**

your page link — nothing to cut out

e.g. `https://soundcloud.com/your-name` — sample format, do not copy it

Open the SoundCloud portal

Test the connection in streamLytics

Meta Ads / Insta

1. Pick your account (dropdown at the top of Meta) → **copy the URL** → paste it above.
2. **Ad accounts** → your account → **Partners** → **Assign partner** → paste **212173878482503** → **Analyst** role. Without it, no data at all.
3. **Instagram** — paste your profile address (business/creator account).

The values to paste:

- **Your ad account link**

paste the full Ads Manager URL — we extract the account number from it

e.g. `https://adsmanager.facebook.com/adsmanager/manage/campaigns?act=123456789012345` — sample format, do not copy it

- **Your Instagram profile link**

we take it from there — nothing to look up in Business Manager

e.g. `https://instagram.com/your-handle` — sample format, do not copy it

Open the Meta Ads / Insta portal

Test the connection in streamLytics

Part 2 — CSV file import

Spotify for Artists

3 file types to export, **all with the « 12 months » filter**. For N tracks you get **N + 2 files** (N timelines + 1 summary + 1 audience). Example: 11 tracks → 13 files.

1. Sign in at artists.spotify.com and open the **Music** tab (disc icon, left sidebar).

Sidebar → Music tab

2. Click the **Songs** sub-tab.

Music → Songs

3. Open **Filters** and set the period to **12 months**.

Period filter → 12 months

4. Click the **download** icon (↓) left of the filter: you get the ...- songs - 1year . csv summary (listeners, streams, saves, release date per song).

Download the songs summary

5. For per-track timelines: in the list, **open a song** (click its row).

Sorties Titres Playlists À venir

Rechercher

N°	Titre	Streams	Auditeurs	Vues de Covers	Sauvegardés	Première sortie
1	Je ne parle pas très bien le français - Original	255	180	21	6	12 avr. 2024
2	Qu'est-ce que le crocheteur du salon?	136	87	24	—	2 août 2024
3	O Chiotte l'enfante Tacome Beck - Original	128	81	24	—	30 août 2024
4	Kimono à semelle de fer	105	62	—	—	25 août 2023
5	Ce te dérange pas si je joue avec ton tapis?	27	25	4	6	16 mars 2024

Song list → open a song

6. On the song page, set the filter to **12 months** then click **download** (↓): <song>- timeline . csv (daily streams). Repeat for **each** song.

File	Expected name	Columns
Per-track timeline	<song>-timeline.csv	date, streams
Songs summary (12 months)	...-songs-1year.csv	song, listeners, streams, saves, release_date
Audience	...-audience-timeline.csv	date, listeners, streams, followers, playlist adds, saves

Apple Music for Artists

Apple Music for Artists has no API: the per-song performance CSV export is the only source (**a single file**). Make sure to set the period to **All Time** for a complete history. FR and EN headers are both recognized.

1. Sign in at artists.apple.com, pick your artist, then on the **Overview** tab set the period selector (top right) to **All Time**.

Overview → period → All Time

2. Click the **Music** tab.

Music tab

3. In the **Songs** section, click **See All** (top right).

Songs → See All

4. Click the **download** icon (↓, top right): you get `songs_... .csv` (Song, Plays, Avg. Listeners, Shazams, Radio Spins, Purchases).

iMusician (distributor)

Two report types, requested **per year** (iterate over every year of your catalogue): the **release summary** (monthly totals per release) and the **sales report** (detail per ISRC/shop/country). The importer auto-detects each type.

1. **Revenue** tab (sidebar) → **Reports** → click **Download report** (top right).

Revenue → Reports → Download report

2. Period **Year**, select a **year**, type **Release summary**, then **Request report**. Repeat for **each year**.

A screenshot of the 'Télécharger le rapport' modal form. The form has a title 'Télécharger le rapport' and a close button. It contains two sections: 'Sélectionnez la période :' and 'Sélectionnez le type de rapport :'. In the first section, the 'An' radio button is selected with a red arrow, and the year '2026' is chosen in the dropdown menu with a red arrow. In the second section, the 'Résumé par sortie' radio button is selected with a red arrow. At the bottom, the 'Demander le rapport' button is highlighted with a red oval.

Year → year → Release summary → Request

3. Do it again choosing **Sales report** (for each year as well).

Télécharger le rapport

Sélectionnez la période :

Mois

An

2026

Sélectionnez le type de rapport :

☐Résumé par sortie
Informations de ventes basées sur les sorties

☒Rapport de ventes

Release summary	*.csv	Statement date, Release title, Track streams, Total revenue
Sales report	*.csv	Sales date, ISRC, Shop, Revenue EUR

DistroKid (distributor)

A single export covers your whole history: the detailed **Bank** report (one row per platform × title × country × month, amounts in **USD** — the USD→EUR conversion rate is set at import time). Format .tsv or .csv, both are auto-detected.

1. Sign in at distrokid.com → **Bank** menu — that's your earnings page.
2. At the bottom of the page, click « **SEE EXCRUCIATING DETAIL** » — the full row-by-row breakdown.
3. Click **Download** to get the file. Above 50,000 rows, DistroKid asks you to filter (period / platform / release) before generating the export — repeat as needed.
4. Import the file here as-is (.tsv or .csv) and adjust the suggested **USD→EUR rate** before confirming.

File	Expected name	Columns
Bank details (earnings breakdown)	*.tsv / *.csv	Sale Month, Store, Title, ISRC, Quantity, Earnings (USD)
