

Getting started with streamMLytics — API & CSV

This guide covers both data sources: **(1) the API connectors**, to fill in on the « API Credentials » page, and **(2) CSV file import**, via the « Add my numbers » page. The outline below lists the platforms covered.

By the end of this guide you will have:

- your accounts connected, and data arriving every night without you coming back to it;
- your Spotify and Apple listens visible on the dashboard;
- what you need to tie promo spend to the listens it produces.

1. Part 1 — API connectors

- Spotify
- YouTube
- SoundCloud
- Meta Ads
- Instagram

2. Part 2 — CSV file import

- Spotify for Artists
- Apple Music for Artists
- iMusician (distributor)
- DistroKid (distributor)

Part 1 — API connectors

Spotify

1. ... button → **Share** → **Copy link to artist** → paste it into the **Artist profile URL** field, on the left.

The ... button → Share → Copy link to artist

The values to paste:

- **Artist profile URL**

paste the full URL of your artist page — we extract the id

e.g. <https://open.spotify.com/artist/4qG1qjeHfkASTdyRGbLWbV> — sample format, do not copy it

[Open the Spotify portal](#)

[Test the connection in streamLytics](#)

YouTube

1. [youtube.com/account_advanced](https://www.youtube.com/account_advanced) → **Channel ID** → **Copy**, and paste it into the **Your YouTube channel link** field, on the left.

The values to paste:

- **Your YouTube channel link**

the `UC...` id, a channel link or your @handle — we resolve it and show you what we found

e.g. https://www.youtube.com/channel/UC_x5XG1OV2P6uZZ5FSM9Ttw — sample format, do not copy it

Note — Free quota ~10,000 units/day; exceeding it returns 403 (temporary).

[Open the YouTube portal](#)

[Test the connection in streamLytics](#)

SoundCloud

1. Open your **SoundCloud profile** and copy the address shown in the browser bar — it looks like `https://soundcloud.com/your-name`.
2. Paste it into **Enter your credentials**, the left-hand column, then **Save**.

The values to paste:

- **SoundCloud profile**

your page link — nothing to cut out

e.g. `https://soundcloud.com/your-name` — sample format, do not copy it

Open the SoundCloud portal

Test the connection in streamLytics

Meta Ads

1. Pick your account (dropdown at the top of Meta) → **copy the URL** → paste it into the **Your ad account link** field, on the left.
2. **Partners** → **Add** → **Give a partner access to your assets** → paste **212173878482503** → tick your ad account → **Analyst** role. Without it, no data at all.

The values to paste:

- **Your ad account link**

paste the full Ads Manager URL — we extract the account number from it

e.g. `https://adsmanager.facebook.com/adsmanager/manage/campaigns?act=123456789012345` — sample format, do not copy it

Open the Meta Ads portal

Test the connection in streamLytics

Instagram

1. Paste your profile address into the **Your Instagram profile link** field, on the left. Your account must be **Business** or **Creator** — a personal account returns nothing. (Instagram → Settings → Account type)

The values to paste:

- **Your Instagram profile link**

we take it from there — nothing to look up in Business Manager

e.g. `https://instagram.com/your-handle` — sample format, do not copy it

Open the Instagram portal

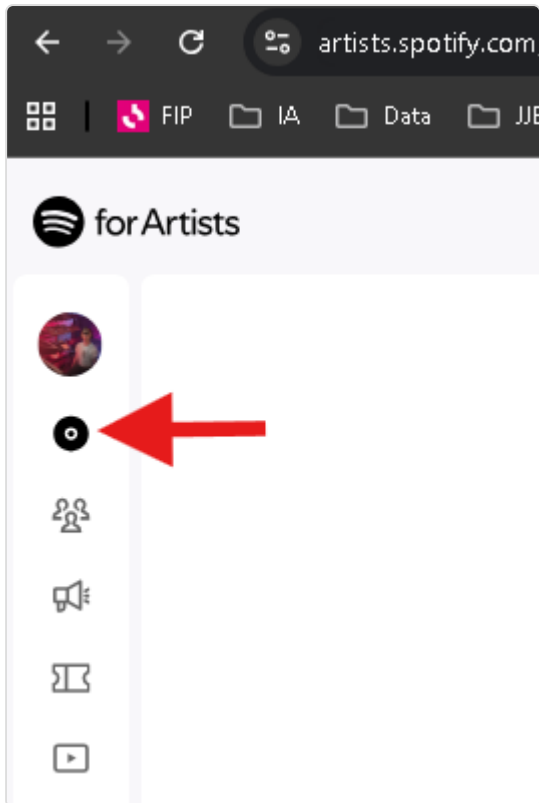

Test the connection in streamLytics

Part 2 — CSV file import

Spotify for Artists

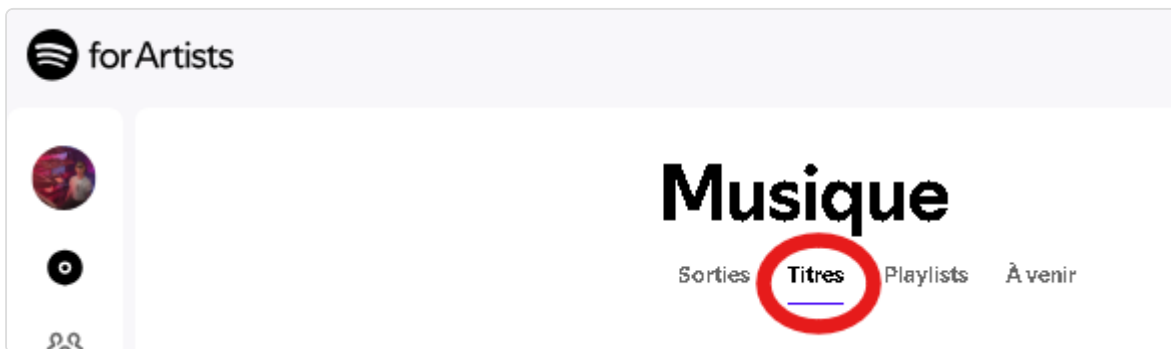

3 file types to export, **all with the « 12 months » filter**. For N tracks you get **N + 2 files** (N timelines + 1 summary + 1 audience). Example: 11 tracks → 13 files.

1. Sign in at artists.spotify.com and open the **Music** tab (disc icon, left sidebar).

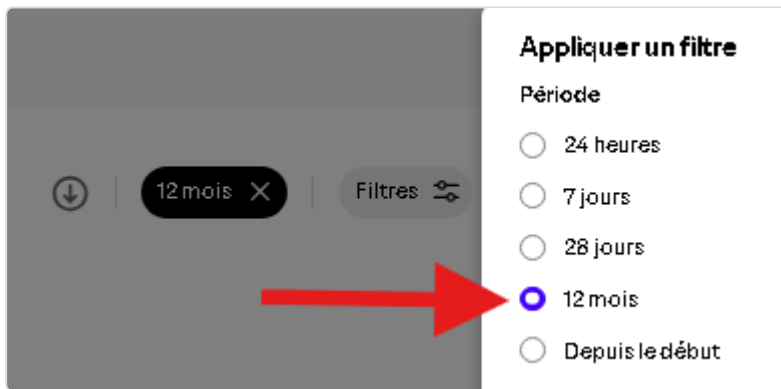

Sidebar → Music tab

2. Click the **Songs** sub-tab.

Music → Songs

3. Open **Filters** and set the period to **12 months**.

Period filter → 12 months

4. Click the **download** icon (↓) left of the filter: you get the ...- songs - 1year . csv summary (listeners, streams, saves, release date per song).

Download the songs summary

5. For per-track timelines: in the list, **open a song** (click its row).

for Artists

Musique

Sorties Titres Playlists À venir

Rechercher

N°	Titre	Streams	Auditeurs	Vues de Covers	Sauvegardés	Première sortie
1	Je ne parle pas très bien le français - Original	255	180	21	6	12 avr. 2024
2	Qu'est-ce que le crechoir du salon?	136	87	24	—	2 août 2024
3	O Chiotte l'entête Tacome Beck - Original	128	81	24	—	30 août 2024
4	Kimono à semelle de fer	105	62	—	—	25 août 2023
5	Ce te dérange pas si je joue avec ton tapis?	27	25	4	6	16 mars 2024

Song list → open a song

6. On the song page, set the filter to **12 months** then click **download** (↓): <song>- timeline . csv (daily streams). Repeat for **each** song.

Song page → 12 months → download

7. Open the **Audience** tab (audience icon, left sidebar).

Sidebar → Audience tab

8. On **Overview**, **12 months** filter, click **download** (↓): ...-audience-timeline.csv (artist-level listeners/streams/followers).

Audience → Overview → download

9. Do **not** use the « All time » filter for the summary: Spotify returns 0 listeners and saves there. The ...-songs-all.csv file is also rejected on import.

File	Expected name	Columns
Per-track timeline	<song>-timeline.csv	date, streams
Songs summary (12 months)	...-songs-1year.csv	song, listeners, streams, saves, release_date
Audience	...-audience-timeline.csv	date, listeners, streams, followers, playlist adds, saves

Apple Music for Artists

Apple Music for Artists has no API: the per-song performance CSV export is the only source. Start with the **Since the beginning** period — that is your total. **One export per year gives you far more.** Export again with the period set to **2023**, then **2024**, then **2025**, and upload all three: Apple stops being a single frozen number and joins the other platforms when you filter by period. You have nothing to type — Apple writes the dates in the filename (songs_..._2024-01-01_2024-12-31.csv) and we read them. **So do not rename the file**; if it has lost its dates, the app will ask you for the period. FR and EN headers recognised.

1. Sign in at artists.apple.com, pick your artist, then on the **Overview** tab set the period selector (top right) to **All Time**.

Download the CSV

5. Repeat for every period in the selector — *Since the beginning, Year to date*, then **each year** (2025, 2024, 2023...). One download per period, and upload them all together: that is what gives Apple Music a year-by-year trend instead of a single number. The dates are in the filename — do not rename it.

iMusician (distributor)

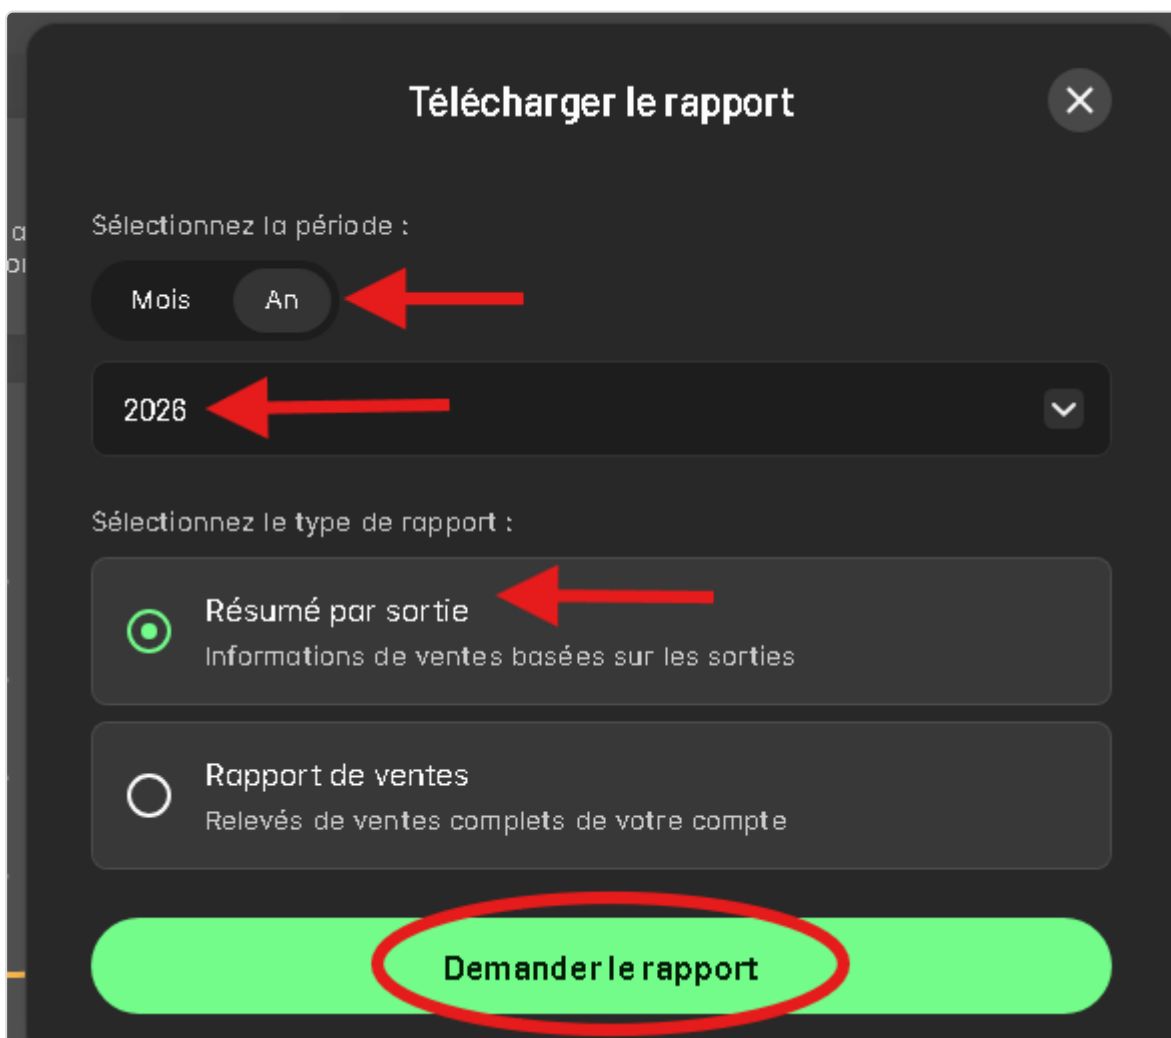

Two report types, requested **per year** (iterate over every year of your catalogue): the **release summary** (monthly totals per release) and the **sales report** (detail per ISRC/shop/country). The importer auto-detects each type.

1. **Revenue** tab (sidebar) → **Reports** → click **Download report** (top right).

Revenue → Reports → Download report

2. Period **Year**, select a **year**, type **Release summary**, then **Request report**. Repeat for **each year**.

Year → year → Release summary → Request

3. Do it again choosing **Sales report** (for each year as well).

Release summary	*.csv	Statement date, Release title, Track streams, Total revenue
Sales report	*.csv	Sales date, ISRC, Shop, Revenue EUR

DistroKid (distributor)

A single export covers your whole history: the detailed **Bank** report (one row per platform × title × country × month, amounts in **USD** — the USD→EUR conversion rate is set at import time). Format .tsv or .csv, both are auto-detected.

1. Sign in at distrokid.com → **Bank** menu — that's your earnings page.
2. At the bottom of the page, click « **SEE EXCRUCIATING DETAIL** » — the full row-by-row breakdown.
3. Click **Download** to get the file. Above 50,000 rows, DistroKid asks you to filter (period / platform / release) before generating the export — repeat as needed.
4. Import the file here as-is (.tsv or .csv) and adjust the suggested **USD→EUR rate** before confirming.

File	Expected name	Columns
Bank details (earnings breakdown)	*.tsv / *.csv	Sale Month, Store, Title, ISRC, Quantity, Earnings (USD)
