

Getting started with streamMLytics — API & CSV

This guide covers both data sources: **(1) the API connectors**, to fill in on the « API Credentials » page, and **(2) CSV file import**, via the « Add my numbers » page. The outline below lists the platforms covered.

By the end of this guide you will have:

- your accounts connected, and data arriving every night without you coming back to it;
- your Spotify and Apple listens visible on the dashboard;
- what you need to tie promo spend to the listens it produces.

1. Part 1 — API connectors

- Spotify
- YouTube
- SoundCloud
- Meta Ads
- Instagram

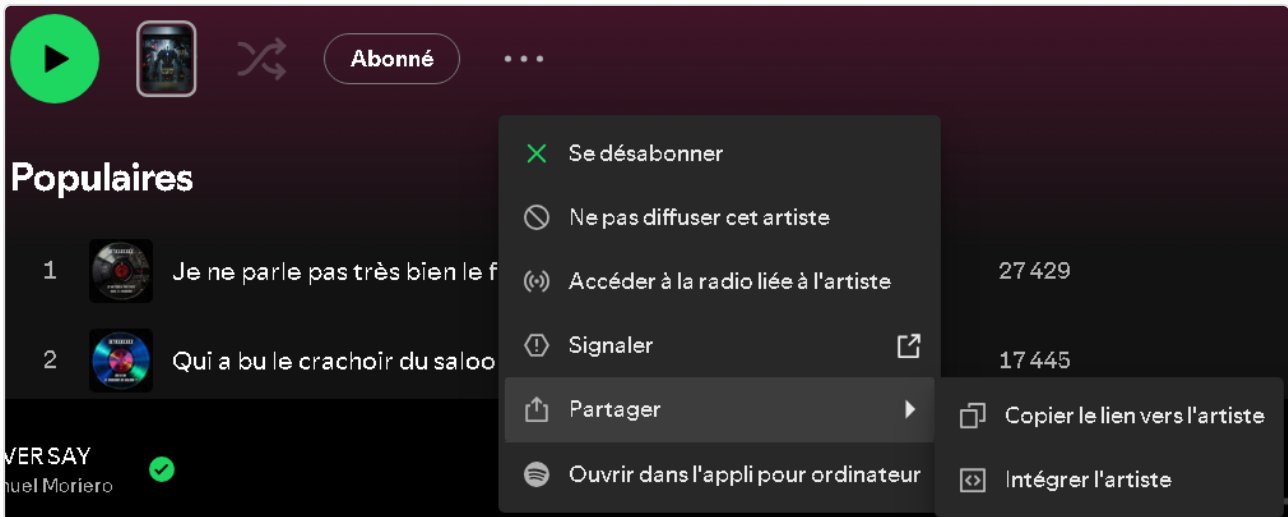

2. Part 2 — CSV file import

- Spotify for Artists
- Apple Music for Artists
- iMusician (distributor)
- DistroKid (distributor)

Part 1 — API connectors

Spotify

1. ... button → **Share** → **Copy link to artist** → paste it into **Artist profile URL**, above.

The ... button → Share → Copy link to artist

The values to paste:

- **Artist profile URL**

paste the full URL of your artist page — we extract the id

e.g. <https://open.spotify.com/artist/4qG1qjeHfkASTdyRGbLWbV> — sample format, do not copy it

[Open the Spotify portal](#)

[Test the connection in streamLytics](#)

YouTube

1. youtube.com/account/advanced → **Channel ID** → **Copy**, and paste it above.

The values to paste:

- **Your YouTube channel link**

the `UC...` id, a channel link or your @handle — we resolve it and show you what we found

e.g. https://www.youtube.com/channel/UC_x5XG1OV2P6uZZ5FSM9Ttw — sample format, do not copy it

Note — Free quota ~10,000 units/day; exceeding it returns 403 (temporary).

[Open the YouTube portal](#)

[Test the connection in streamLytics](#)

SoundCloud

1. Open your **SoundCloud profile** and copy the address shown in the browser bar — it looks like `https://soundcloud.com/your-name`.
2. Paste it into **Enter your credentials**, the left-hand column, then **Save**.

The values to paste:

- **SoundCloud profile**

your page link — nothing to cut out

e.g. `https://soundcloud.com/your-name` — sample format, do not copy it

Open the SoundCloud portal

Test the connection in streamLytics

Meta Ads

1. Pick your account (dropdown at the top of Meta) → **copy the URL** → paste it above.
2. **Partners** → **Add** → **Give a partner access to your assets** → paste **212173878482503** → tick your ad account → **Analyst** role. Without it, no data at all.

The values to paste:

- **Your ad account link**

paste the full Ads Manager URL — we extract the account number from it

e.g. `https://adsmanager.facebook.com/adsmanager/manage/campaigns?act=123456789012345` — sample format, do not copy it

Open the Meta Ads portal

Test the connection in streamLytics

Instagram

1. Paste your profile address above. Your account must be **Business** or **Creator** — a personal account returns nothing. (Instagram → Settings → Account type)

The values to paste:

- **Your Instagram profile link**

we take it from there — nothing to look up in Business Manager

e.g. `https://instagram.com/your-handle` — sample format, do not copy it

Open the Instagram portal

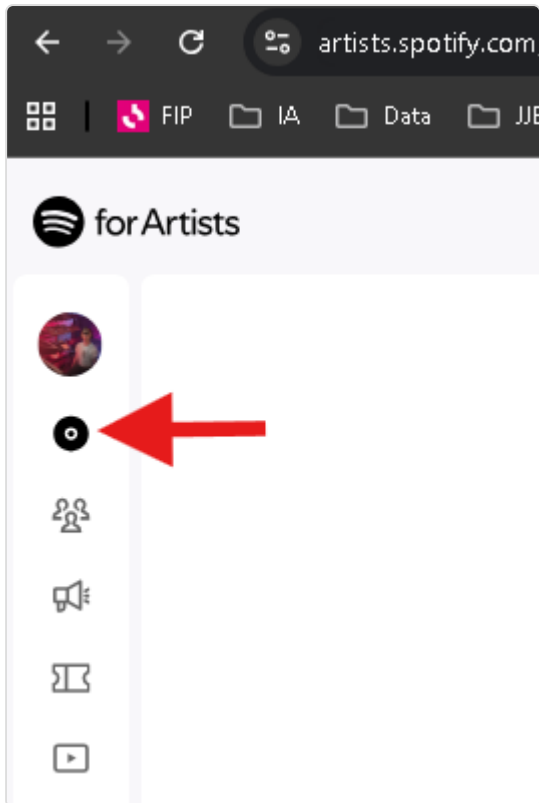

Test the connection in streamLytics

Part 2 — CSV file import

Spotify for Artists

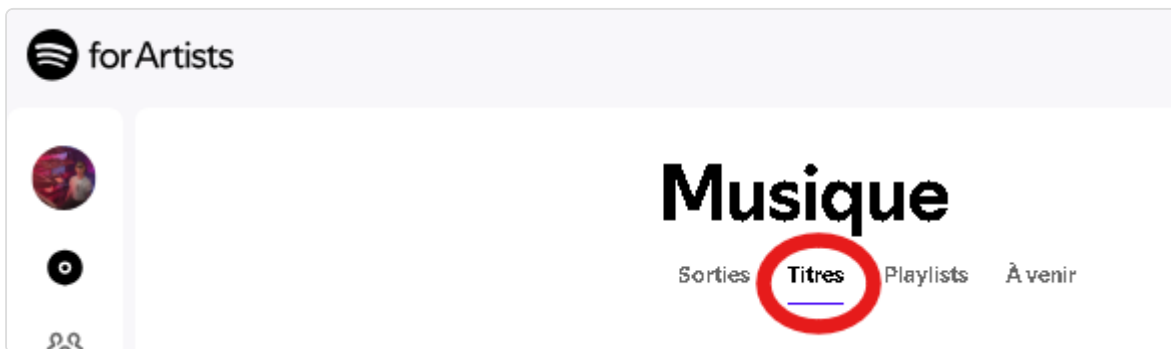

3 file types to export, **all with the « 12 months » filter**. For N tracks you get **N + 2 files** (N timelines + 1 summary + 1 audience). Example: 11 tracks → 13 files.

1. Sign in at artists.spotify.com and open the **Music** tab (disc icon, left sidebar).

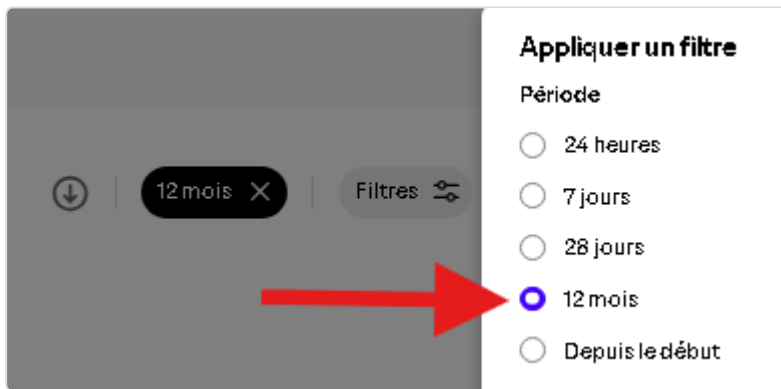

Sidebar → Music tab

2. Click the **Songs** sub-tab.

Music → Songs

3. Open **Filters** and set the period to **12 months**.

Period filter → 12 months

4. Click the **download** icon (↓) left of the filter: you get the ...- songs - 1year . csv summary (listeners, streams, saves, release date per song).

Download the songs summary

5. For per-track timelines: in the list, **open a song** (click its row).

for Artists

Musique

Sorties Titres Playlists À venir

Rechercher

N°	Titre	Streams	Auditeurs	Vues de Covers	Sauvegardés	Première sortie
1	Je ne parle pas très bien le français - Original	255	180	21	6	12 avr. 2024
2	Qu'est-ce que le crechoir du salon?	136	87	24	—	2 août 2024
3	O Chiotte l'artiste Tacome Beck - Original	128	81	24	—	30 août 2024
4	Kimono à semelle de fer	105	62	—	—	25 août 2023
5	Ce te dérange pas si je joue avec ton tapis?	27	25	4	6	16 mars 2024

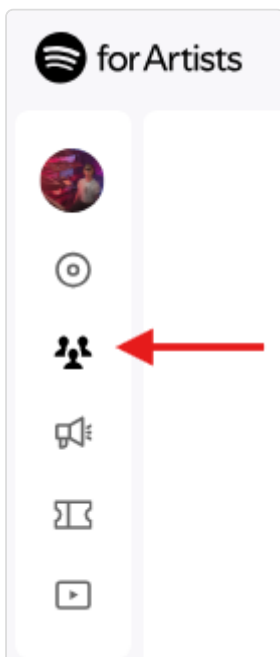

Song list → open a song

6. On the song page, set the filter to **12 months** then click **download** (↓): <song>- timeline . csv (daily streams). Repeat for **each** song.

Song page → 12 months → download

7. Open the **Audience** tab (audience icon, left sidebar).

Sidebar → Audience tab

8. On **Overview**, **12 months** filter, click **download** (↓): ...-audience-timeline.csv (artist-level listeners/streams/followers).

Audience → Overview → download

9. Do **not** use the « All time » filter for the summary: Spotify returns 0 listeners and saves there. The ...-songs-all.csv file is also rejected on import.

File	Expected name	Columns
Per-track timeline	<song>-timeline.csv	date, streams
Songs summary (12 months)	...-songs-1year.csv	song, listeners, streams, saves, release_date
Audience	...-audience-timeline.csv	date, listeners, streams, followers, playlist adds, saves

Apple Music for Artists

Apple Music for Artists has no API: the per-song performance CSV export is the only source (**a single file**). Make sure to set the period to **All Time** for a complete history. FR and EN headers are both recognized.

1. Sign in at artists.apple.com, pick your artist, then on the **Overview** tab set the period selector (top right) to **All Time**.

The screenshot shows the 'Overview' tab for an artist. The 'Période' dropdown is set to 'Depuis le début'. The 'Écoutes' (Streams) are 3,2k, 'Moy. d'auditeurs journalière' (Daily listeners) is 3, 'Nombre de Shazam' is 1,4k, and 'Radio Spins' is 8. The 'Étapes clés' (Key moments) section shows 'Depuis le début' as the selected period.

Overview → period → All Time

2. Click the **Music** tab.

The screenshot shows the 'Music' tab selected. The 'Musique' tab is highlighted with a red circle.

Music tab

3. In the **Songs** section, click **See All** (top right).

The screenshot shows the 'Morceaux (11)' section. The 'Tout afficher' button is highlighted with a red circle. The table below shows the top 5 songs.

MORCEAU	ÉCOUTES	MOY. D'AUDITEURS JOURNALIÈRE	ACHATS	NOMBRE DE SHAZAM	RADIO SPINS
Je ne parle pas très bien le français	562	1	0	250	0
Qui a bu le crachoir du saloon ?	477	1	0	475	0
Patte Velours 1ère vitesse	438	3	0	2	0
Qui a sali mon slip avec de la gadoue?	341	3	1	14	0
Ça te dérange passif je joue avec ton tapis? (Remix) REMIX	326	1	0	11	0

Songs → See All

4. Click the **download** icon (↓, top right): you get `songs_... .csv` (Song, Plays, Avg. Listeners, Shazams, Radio Spins, Purchases).

iMusician (distributor)

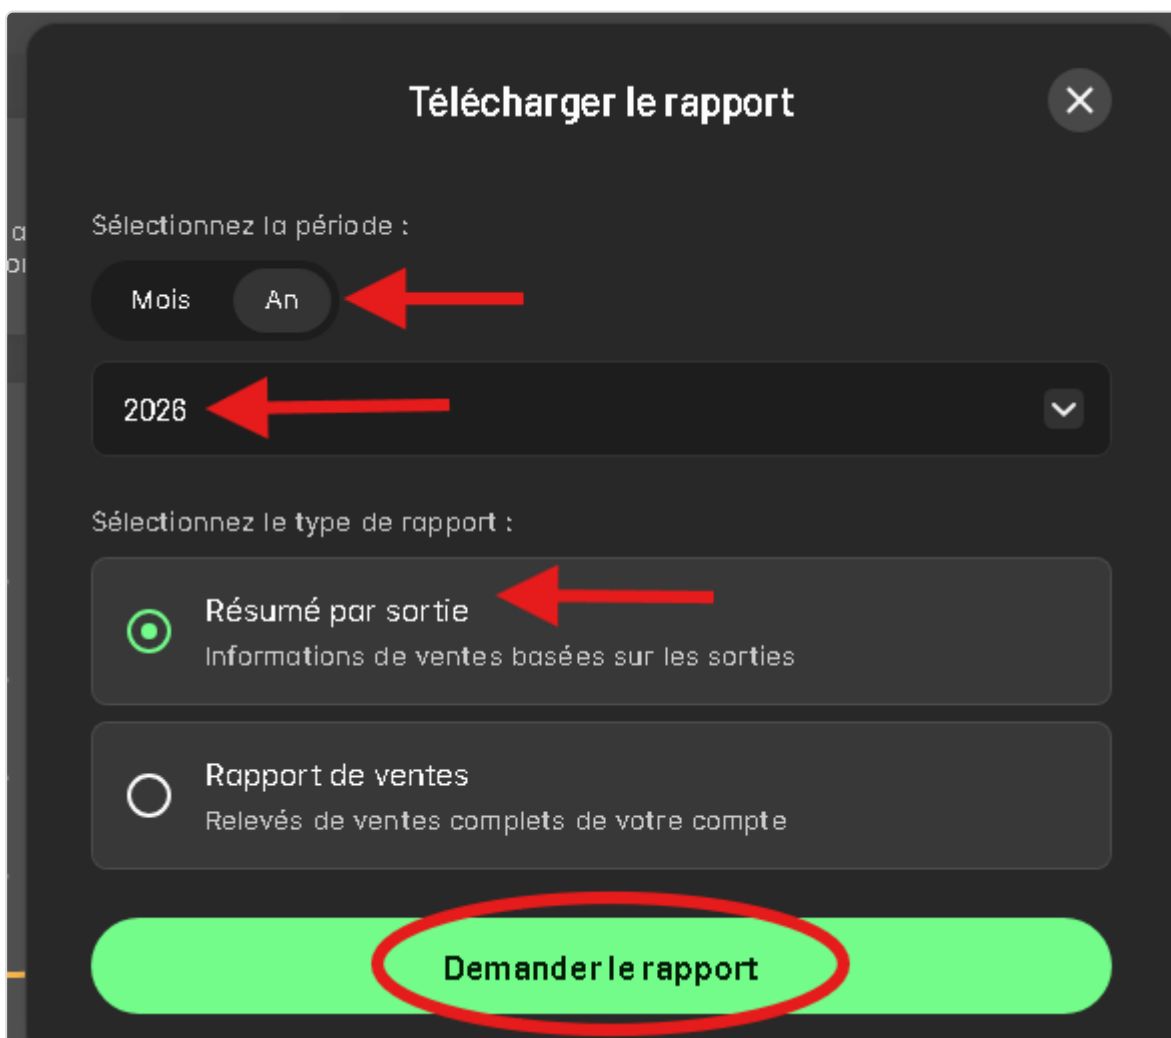

Two report types, requested **per year** (iterate over every year of your catalogue): the **release summary** (monthly totals per release) and the **sales report** (detail per ISRC/shop/country). The importer auto-detects each type.

1. **Revenue** tab (sidebar) → **Reports** → click **Download report** (top right).

Revenue → Reports → Download report

2. Period **Year**, select a **year**, type **Release summary**, then **Request report**. Repeat for **each year**.

Year → year → Release summary → Request

3. Do it again choosing **Sales report** (for each year as well).

File	Expected name	Columns
------	---------------	---------

Release summary	*.csv	Statement date, Release title, Track streams, Total revenue
Sales report	*.csv	Sales date, ISRC, Shop, Revenue EUR

DistroKid (distributor)

A single export covers your whole history: the detailed **Bank** report (one row per platform × title × country × month, amounts in **USD** — the USD→EUR conversion rate is set at import time). Format .tsv or .csv, both are auto-detected.

1. Sign in at distrokid.com → **Bank** menu — that's your earnings page.
2. At the bottom of the page, click « **SEE EXCRUCIATING DETAIL** » — the full row-by-row breakdown.
3. Click **Download** to get the file. Above 50,000 rows, DistroKid asks you to filter (period / platform / release) before generating the export — repeat as needed.
4. Import the file here as-is (.tsv or .csv) and adjust the suggested **USD→EUR rate** before confirming.

File	Expected name	Columns
Bank details (earnings breakdown)	*.tsv / *.csv	Sale Month, Store, Title, ISRC, Quantity, Earnings (USD)
